

COFACE COUNTRY & SECTOR RISKS HANDBOOK 2024

MAJOR TRENDS OF THE WORLD ECONOMY

ANALYSIS AND FORECASTS FOR 160 COUNTRIES AND 13 SECTORS

coface
FOR TRADE

This handbook is intended for:

- Corporate executives with decisions to make in terms of export, project launches, or investment in high risk countries;
- Managers of risk or international operations in banking, multilateral financial institutions, and insurance or reinsurance companies (acting in a private capacity or on behalf of government);
- Government managers concerned with country risk;
- Consultants and lawyers specialized in international business;
- Researchers, academics, and students interested in country risk.

With contributions from:

- **Coface Economic Research Department:**
Khalid Aït-Yahia, Bernard Aw, Eve Barré, Lucile Bembaron, Christiane von Berg, Jean-Christophe Caffet, Marcos Carias, Nouri Chatillon, Eléna Collin, Aroni Chaudhuri, Anna Farrugia, João Ferraz, Bruno De Moura Fernandes, Dominique Fruchter, Apolline Grieveldinger, Seltem Iyigun, Diana Karachanski, Patricia Krause, Simon Lacoume, Erwan Madelénat, Ruben Nizard, Elisa Petit, Laurine Pividal, Grzegorz Siewicz, Jonathan Steenberg and Ivana Terlevic.

GLOSSARY

2024, back to normal?

— **Xavier Durand** —
CEO of Coface

Ultimately, 2023 was not the annus horribilis we had feared. Fortunately, the risks, most notably in terms of energy supply, did not materialise - in Europe at least. The global economy is expected to have grown by around 2.5%. While still below its potential, this performance is nonetheless decent given the headwinds that once again blew in over the year. We should remember that 2023 began with a banking crisis in the United States and ended with a new conflict, this time in the Middle East. In the meantime, China disappointed, the United States convinced, and Europe survived in a somewhat turbulent monetary and financial environment. In contrast to investors' expectations, the main central banks continued to raise their key rates (+100 basis points for the Federal Reserve, +175 for the Bank of England, +200 for the European Central Bank), triggering a severe contraction in lending and a sharp rise in long-term interest rates. This was not enough to upset the equity markets, which were fundamentally supported by the resilience of business activity and corporate margins. The faster-than-expected fall in inflation due to lower commodity prices and, at the very end of the year, the prospect of major central banks significantly lowering their key interest rates also contributed to this momentum.

The main reason for the better-than-expected outcome in 2023 is the initially underestimated resilience of private agents' balance sheets. This 'balance sheet resilience' has been at the root of a virtuous circle combining, until now, low corporate losses, resilient employment, and household dissaving. This was particularly the case in the United States, where consumption remained an engine of growth (accounting for 1.5 points of GDP in 2023, with GDP growth estimated at around +2.5%). However, the latest figures suggest that this fine mechanism is

starting to jam. Excess savings and cash flow have dwindled significantly, while corporate insolvencies are firmly on the rise, both in terms of frequency and the size of the claims concerned.

How will 2024 unfold? Right off the bat: the only certainty we can have is that of being surprised. The events in recent years have shown that history is accelerating, and it would be strange if 2024 were an exception. All the more so as the year will be particularly busy from an electoral standpoint, with legislative and/or presidential elections scheduled in 70 countries that account for over half the world's population and GDP: between Taiwan a few weeks ago and the United States in November, voters will be called to the polls in India, Pakistan, South Africa and Iran... not to mention the European elections to be held next spring, against a backdrop of heightened social tensions and the rise of populism of all kinds. This should cause a few upheavals at national level,

« The events in recent years have shown that history is accelerating, and it would be strange if 2024 were an exception. » — Xavier Durand

in a geopolitical context that is still in turmoil: the war in Ukraine is entering its third year, and the conflict between Israel and Hamas now threatens to set the whole region ablaze.

From a strictly macroeconomic point of view, the hope of a prolonged but still soft landing for the global economy remains valid. While a few months ago we feared the onset of severe market turbulence, the easing of financial conditions means that we can look forward to the year ahead more calmly. Our central scenario therefore rules out the hypothesis of a financial crash and a hard landing. Nevertheless, the global economy is set to slow substantially, losing almost half a percentage point of growth compared with last year (+2.2%). Most of this slowdown will come from the major developed economies that outperformed in 2023 - led by the United States, whose growth is still expected to exceed +1% - but also from China (+4.3%), whose growth model is struggling to rebalance, and which still must purge the excesses of the past (property development, manufacturing overcapacity, etc.). Europe, for its part, should accelerate slightly under the effect of the expected (and hoped-for) rebound of the German economy, although growth on the Old Continent will remain below its potential (+0.9%). Lastly, the weakening of the dollar and interest rates should give some breathing room to emerging economies faced with constraints on access to external (re) financing.

Yet nothing is guaranteed, and our central scenario is more like a ridge than a boulevard. In terms of inflation, for the time being, the downturn remains essentially linked to base effects on energy prices and the fall in goods prices, against a backdrop of a rebalancing of consumption towards services and a normalisation of supply chains. The challenge in 2024 will be to determine whether the monetary tightening that has been underway for over 18 months is sufficient to achieve more than this mechanical disinflation, and to go the 'last mile' to bring inflation back to 2%. The buoyancy of services prices, still up by 4-5% year-on-year, suggests that the battle is well under way but not yet won.

In any case, barring an accident, central banks will not be cutting their key rates as quickly and as aggressively as they raised them. Similarly, long-term interest rates are unlikely to return to where they stood over the last fifteen years anytime soon. In other words, the latent conflict of objectives in most developed countries between broadly restrictive monetary policies on the one hand, and expansionary fiscal policies on the other, will remain a major source of instability.

The twenty-eighth edition of this handbook covers all these questions and attempts to provide answers by adopting, as usual, a dual geographical and sectoral approach. I wish everyone an enjoyable read of this document, which Coface publishes every year.

How to use the handbook

SECTORS

1 Sector name

2 Coface Regional Sector Risk Assessments

This assessment indicates the risk presented by companies in the sector in regions around the world, as considered by Coface in its quarterly sector assessments.

3 Analysis of Strengths/Weaknesses

A summary of the sector's global strengths and weaknesses.

4 Risk Analysis Synthesis

You will find in this section a synthetic analysis of economic and financial development in the markets, as well as main risks in the sector in terms of global trends.

5 Sector Charts

These charts highlight one or more key aspects of developments in the sector.

TOOLS FOR IDENTIFYING, ASSESSING AND MONITORING THE RISKS BUSINESSES ARE FACING

As a credit insurer, Coface's added value comes from its ability to proactively provide its clients with detailed risk analyses, allowing them to make the right decisions at the right time and prevent credit risks. Its analyses include country and business climate assessments for 160 countries, as well as sector risk, and assessment of companies' default rate. Regular economic publications supplement these assessments developed by Coface*.

Country risk assessment*

The Coface Country Risk Assessment is an indicator of the overall level of trade credit risk in a country at a given point in time. More specifically, it assesses how the ability of firms to generate cash flow is shaped by the country's structural characteristics (level of development, fiscal sustainability, quality of governance, social/political risks, sensitivity to climate risk) and the macroeconomic conditions of the moment. The country risk assessment covers 160 countries on an 8-step scale: A1, A2, A3, A4, B, C, D, E, in order of increasing risk.

Business climate assessment*

This makes it possible to see whether company accounts are available and reliable, whether the legal system ensures fair and effective protection of creditors, whether the country's institutions provide a favourable framework for B2B transactions and whether the domestic market is easy to access. The assessments are based on data from international organisations, but also, and primarily, on the experience of Coface's entities across the world. This assessment, integrated in the country assessment, covers 160 countries on an 8-step scale: A1, A2, A3, A4, B, C, D, E, in order of decreasing business climate quality.

Sector risk assessment*

Every quarter, Coface reviews the assessments of 13 sectors in 28 countries (representing approximately 88% of global GDP) in 6 major regions of the world. In order to assess these risks, Coface relies on its own methodology, which is based on three pillars and eight criteria, and has been strengthened with more quantitative criteria. The first pillar focuses on data relative to Coface's expertise on corporate payment behaviour worldwide, in the various sectors under consideration. The second pillar concerns forecasts of processed financial data. The last pillar brings together different criteria (evolution of commodity price forecasts, risks linked to structural changes that may occur in a sector, and country risk assessments, which

have an impact on the risk assessment of a given sector in a particular country).

The criteria included in the first two pillars are summarised below.

Coface's expertise regarding payment experience:

- Unpaid ratio level for companies of the same sector in a given country.
- Forecasts on changes in default amounts in a given sector at the global level.
- Sector risk assessment from Coface's underwriting services.

Pillar regarding the use of corporate financial data:

- Daily Sales Outstanding (DSO).
- Analysis of quantiles for forecasts in financial data (net debt, profitability).

Our sector risk assessment model assigns a relative weight to each criterion, in order to arrive at a final risk assessment for the sector in a selected country or region.

We now integrate the impact of "network effects" into our sector methodology. Using Coface's internal data, we create a network (also called a graph) that represents the interactions of sectors/countries between them and thus

allows us to assess the impact of a shock in a given sector/country on the others.

The sector risk assessment is on a 4-step scale: low, medium high, very high, in order of increasing risk (see p. 4).

Assessment of company default rate

The DRA (Debtor Risk Assessment) measures the default rate of companies all over the world. It is calculated on the basis of indicators such as financial soundness, profitability, solvency, as well as the company's environment and management. The assessment scale ranges from 0 (company in default) to 10 (best possible rating). The DRAs are made available to Coface clients on a dedicated website: Cofanet.

Economic publications*

Coface regularly publishes economic publications that deal with country risk, sector risk, and the risk of company insolvency.

* Assessments and studies available on <http://www.coface.com/Economic-Studies-and-Country-Risks>

DEFINITION OF COUNTRY RISK ASSESSMENTS

A1	Very good macroeconomic and financial outlook. Stable political context. Very low sovereign and climate risk.
A2	Good macroeconomic and financial outlook. Generally stable political context. Overall good sovereign and climate risk.
A3	Less favourable macroeconomic and financial outlook. Political context remains stable. satisfactory climate and sovereign risk.
A4	Economic and financial outlook could be marked by some weaknesses. Political context could suffer from tension. Non-trivial climate and sovereign risk.
B	Uncertain economic and financial outlook. Political context could suffer strong tensions. Exposure to climate and/or sovereign risk is a noticeable issue.
C	Very uncertain economic and financial outlook. Political context could be unstable. Exposure to climate and/or sovereign risk is a significant issue.
D	Highly uncertain economic and financial outlook. Very unstable political context. Sovereign and/or climate risk represent a material threat.
E	Extremely uncertain economic and financial outlook. Extremely unstable political context. These countries often face war, endemic civil unrest and/or corruption, and international sanctions.

DEFINITION OF BUSINESS CLIMATE ASSESSMENTS

A1	Company reports are (generally) available and reliable. Effective debt collection. High quality institutions. Domestic market is almost perfectly open. Very satisfactory business climate.
A2	Company reports, when available, are reliable. Debt collection works reasonably well. Institutions generally perform well. Domestic market is widely open. Business climate relatively stable but could be improved.
A3	Company reports are not always available, but when they are, are relatively reliable. Debt collection and institutions can present some shortcomings. Domestic market is relatively open. Safe business climate, but shortcomings can arise.
A4	Company reports are not always available or reliable. Debt collection is not always effective and institutions have some inadequacies. Access to domestic market presents some constraints. Business climate is acceptable but can pose problems.
B	Reliability and availability of company reports vary significantly. Debt collection is often difficult. Institutions display weaknesses. Domestic market is not very accessible. Business climate is unstable and underperforms.
C	Company reports are often unavailable and not very reliable. Debt collection is somewhat random. Institutions display numerous weaknesses. Difficult access to domestic market. Difficult business climate.
D	Company reports are often unavailable and unreliable. Debt collection is random. Institutions display significant weaknesses. Very difficult access to domestic market. Very difficult business climate.
E	Company reports are rarely available, and are rarely reliable when they are. The legal system makes debt recovery extremely uncertain. Critical institutional weaknesses. Nearly inaccessible domestic market. Extremely difficult business climate.

For further information

The sector assessments are proposed on a scale of four levels: low, medium, high or very high, in ascending order of risk.

— You can find them on page 14

COUNTRY RISK
ASSESSMENT MAP

**DOWNGRADES
IN 2023**

**UPGRADES
IN 2023**

Coface assesses the average credit risk of companies in a given country. To achieve this, Coface uses macroeconomic, financial and political data.

Its originality is to take into account Coface's payment experience recorded for the country's businesses, and its perception of the country's business climate.

INTRODUCTION TO SECTOR RISK ASSESSMENTS NOTES

2024 Coface Sector Risk Assessment

Every quarter, Coface reviews the assessments of 13 sectors in 28 countries (representing approximately 83% of global GDP) in 6 major regions of the world. In order to assess these risks, Coface relies on its own methodology, which is based on three pillars and eight criteria, and has been strengthened with more quantitative criteria. The first pillar focuses on data relative to Coface's expertise on corporate payment behaviour worldwide, in the various sectors under consideration. The second pillar concerns forecasts of processed financial data. The last pillar brings together different criteria (evolution of commodity price forecasts, risks linked to structural changes that may occur in a sector and country risk assessments, which have an impact on the risk assessment of a given sector in a particular country). The criteria included in the first two pillars are summarised below.

Coface's expertise regarding payment experience:

- Unpaid ratio level for companies of the same sector in a given country.
- Forecasts on changes in default amounts in a given sector at the global level.
- Sector risk assessment from Coface's underwriting services.

Pillar regarding the use of corporate financial data:

- Daily Sales Outstanding (DSO).
- Analysis of quantiles of forecasts on financial data (net debt, profitability).

Our sector risk assessment model assigns a relative weight to each criterion, in order to arrive at a final risk assessment for the sector in a selected country or region.

We now integrate the impact of "network effects" into our sector methodology. Using Coface's internal data, we create a network (also called a graph) that represents the interactions of sectors/countries between them and thus allows us to assess the impact of a shock in a given sector/country on the others.

REGIONAL SECTOR RISK ASSESSMENT

This assessment scales on four steps, in order of increasing risk: **Low, Medium, High or Very High**.

SECTOR	ASIA - PACIFIC	CENTRAL & EASTERN EUROPE	LATIN AMERICA	MIDDLE EAST & TÜRKIYE	NORTH AMERICA	WESTERN EUROPE
AGRI-FOOD	Medium	Low	Low	Medium	Low	Medium

AGRI-FOOD

Sector risk assessments

ASIA-PACIFIC	HIGH
CENTRAL & EASTERN EUROPE	MEDIUM
LATIN AMERICA	MEDIUM
MIDDLE EAST & TÜRKIYE	HIGH
NORTH AMERICA	MEDIUM
WESTERN EUROPE	HIGH

- The sector is relatively resilient to economic shocks, as food requirements are not easily compressed
- Comfortable stock levels for 2024, particularly for basic cereals (wheat, soya, etc.)

- Sector highly vulnerable to climatic and biological hazards, exacerbated by the increasing frequency of extreme events (droughts, etc.)
- Sector impacted by protectionist tensions
- Falling production levels for many agricultural commodities in 2024

RISK ANALYSIS SYNTHESIS

2023 was a year of stabilization for the agri-food sector. Increased global cereal production and lower fertilizer prices have led to a significant drop in the prices of most foodstuffs, relegating the idea of food shortages dearth to the back burner in most countries around the world. However, soaring sugar and cocoa prices, as well as increased protectionist measures on Indian rice, are a reminder that the sector remains vulnerable.

2024 will see a rebound in cereal production and increased supply tensions for sugar and cocoa. Indeed, in 2024, the meteorological factor will be decisive, with the El Niño climate-meteorological phenomenon - and with it, its share of droughts, heatwaves, and other extreme meteorological disturbances. This is why we consider the agri-food sector to be risky, or even very risky, in many countries. Indeed, with major meteorological consequences throughout the Indo-Pacific region, we are forecasting production losses - -2% year-on-year in global cereal production in 2024 - in many countries (Australia, Brazil, India, etc.). These disruptions are likely to affect the prices of several agricultural commodities (sugar, rice, palm oil) and weaken global agri-food supply chains.

In terms of risk, it seems to us that sugar will be a particularly sensitive commodity this year, with a major imbalance between production levels and demand, both for food and energy (bioethanol production). End of 2023, sugar prices rose by 35% YoY, to USD 550/t (International Sugar Organisation). In 2024, although the price surge will slow down, but prices will still be much higher than in previous years.

AUTOMOTIVE

Sector risk assessments

ASIA-PACIFIC	HIGH
CENTRAL & EASTERN EUROPE	MEDIUM
LATIN AMERICA	HIGH
MIDDLE EAST & TÜRKIYE	HIGH
NORTH AMERICA	HIGH
WESTERN EUROPE	HIGH

- Key-sector for the neutral-carbon mobility transition
- Important investments in R&D
- Global supply chain is well-integrated

- Procyclical sector vulnerable to global economic outlook (interest rates, households' confidence, etc.)
- Highly impacted by trade tensions regarding supply chain (semi-conductors, chips, etc.)
- Increasingly constrained by environmental rules regarding greenhouse gas emissions
- Growing world competition due to entrance of new stakeholders, more specifically in EVs

RISK ANALYSIS

In 2023, the automotive industry rebounded overall, after a sluggish 2022, in terms of both production and sales of new vehicles.

However, growth in the sector is expected to slow in 2024. On a global scale, car production is expected to reach 2 to 2.5%, driven in particular by the US and China, with a volume of vehicles produced of around 85 to 90 million units.

At the same time, 2024 will confirm the strong growth seen in the electric vehicle segment (+35% in 2023 and +30% in 2024 (f)). The decarbonization of fleets, essentially through electrification, has polarized much of the world's economic competition around Li-ion batteries and electric vehicles. Once again, this year, China will dominate sales of electric vehicles (60% of global sales, 6 million units), with an electric fleet that will represent near to 35% of the Chinese car fleet.

In response, the US and Europe will continue to deploy their respective industrial strategies, largely focused on electrical vehicles batteries (gigafactories). Thus, almost 75% of US investment under the Inflation Reduction Act will be devoted to gigafactory development (i.e. USD 64 billion).

However, the outlook for growth in these countries is likely to be only moderately favorable to the sector. Indeed, the macroeconomic context continues to weigh on new order, particularly in Europe, and should result in slight growth in manufacturing activity (in volume terms) in the automotive sector in 2024.

CHEMICAL

Sector risk assessments

ASIA-PACIFIC	HIGH
CENTRAL & EASTERN EUROPE	HIGH
LATIN AMERICA	HIGH
MIDDLE EAST & TÜRKIYE	VERY HIGH
NORTH AMERICA	MEDIUM
WESTERN EUROPE	HIGH

- Some specialty chemicals companies benefit from innovative products intended to fight environmental risks
- Specialty chemical companies are less vulnerable to changes in the economic cycle than petrochemical companies
- Strong appetite from emerging countries for building domestic petrochemical industries

- Petrochemical products are very dependent on the economic situation
- Stricter regulatory environment is forcing producers to review their business models
- High raw material prices
- A risk of overcapacity appears in certain petrochemical segments

RISK ANALYSIS SYNTHESIS

Three segments are the subject of our attention when it comes to the chemical sector: petrochemicals, specialty chemicals and fertilizers. Petrochemical products are more sensitive to changes in global economic conditions while specialty chemicals seem much more resilient. Finally, fertilizers are more responsive to the vagaries affecting the agri-food sector.

In 2024, Coface predicts that petrochemicals will continue to suffer from geopolitical repercussions and the deterioration of the global economic situation, particularly industrial activity. A scissor effect affects industrial margins: on the one hand with a drop in overall demand; on the other with an increase in the price of inputs and energy. In addition, relocations as close as possible to energy sources as well as in-depth integration of the sector are looming and risk increasing the imbalances between supply and demand. Medium-term uncertainty is increasing as production capacities will increase in the coming years, particularly in Asia, the Middle East and North America.

Lastly, the path to carbon neutrality (Net Zero) will push companies in the sector to reduce their environmental footprint to get access to financing, as well as to avoid the risks of litigation which are increasing due to growing pressure from activists.

CONSTRUCTION

Sector risk assessments

ASIA-PACIFIC	VERY HIGH
CENTRAL & EASTERN EUROPE	VERY HIGH
LATIN AMERICA	HIGH
MIDDLE EAST & TÜRKIYE	VERY HIGH
NORTH AMERICA	HIGH
WESTERN EUROPE	VERY HIGH

- Persistent urbanization in the emerging world and undersupply of housing in large cities in advanced economies
- Energy transition offers business opportunities, investment and innovation for companies in the sector
- Strong push for infrastructure development and renovation

- Level of corporates' indebtedness remains high, particularly in China
- High household debt at the global level
- Vulnerable to supply chain disruptions and labour shortages
- Pro-cyclical sector, sensitive to a high interest rates environment

RISK ANALYSIS SYNTHESIS

Construction is a cyclical sector, very sensitive to financial conditions and the interest rate level. This is the reason why the sector is in a challenging situation currently. For the time being, a backlog of work caused by the pandemic and subsequent supply chain issues are keeping activity somewhat stable but the outlook is more uncertain with restrained demand caused by high financial costs.

Timid demand is a constraint on the sector at the moment. Demand for residential construction is suffering due to high interest rates and housing affordability issues, commercial demand is strained by changing needs and financial constraints, while demand stemming from infrastructure is more stable and even strong in some parts of the world.

Financial conditions are difficult with banks' credit standards tight along with interest rates having risen rapidly in much of the world. As the construction sector is highly dependent on debt, operating in a high interest rate environment has a direct effect on both supply and demand.

In addition to rising financial costs, construction costs have been rising quickly in most advanced economies through consecutive waves: initially supply chain issues pushing up costs, followed by elevated commodity prices, high energy prices, and lastly rising wage costs. This has resulted in construction costs being substantially higher (around 30% in US and Europe) in 2023 than in 2019.

With an increased focus on environmental, social and governance (ESG) standards, one of the key issues faced by construction companies, particularly in advanced economies, is managing the decarbonisation of their activities and social challenges. There is a necessity to reduce emissions as the sector is particularly energy intensive.

ENERGY

Sector risk assessments

ASIA-PACIFIC	HIGH
CENTRAL & EASTERN EUROPE	HIGH
LATIN AMERICA	HIGH
MIDDLE EAST & TÜRKIYE	HIGH
NORTH AMERICA	MEDIUM
WESTERN EUROPE	HIGH

- Oil companies' ongoing efforts to lower their breakeven point and cash-in on high oil prices
- Diversification of revenue streams of large oil and gas companies
- Important developments of renewables, especially solar, to fight climate change's effects

- High levels of debt, especially for companies exploiting non-conventional oils
- High volatility of crude oil prices
- Strong pressure from environmental activists to reduce investment in fossil fuels

RISK ANALYSIS SYNTHESIS

Oil and gas producing companies will face demand growing at a slower pace during 2024, while supply, impacted by OPEC production cuts, is expected to post growth following a similar path. Coface forecasts Brent crude oil prices to average 82 USD per barrel in 2024, slightly down from 83 USD per barrel in 2023, but it is not immune to upside risk due to geopolitical events currently unfolding. Exploration and production companies should continue to show strong financial discipline, in order to keep costs manageable and generate adequate levels of cash. However, they should also continue to invest, notably for those evolving in offshore fields.

Moreover, renewables, notably wind equipment makers, are suffering from permitting and some ongoing supply chain issues. This is particularly the case in the offshore segment. They also face more competition from Chinese turbines makers, which benefit from an access to a large domestic market and financial help from the central State, enabling them to cut their bidding prices. Finally, the high interest rate environment is prompting developers to ask for hikes in electricity prices, or to leave projects whose conditions are deemed uneconomical.

The fight against the effects of climate change will undoubtedly continue to impact the energy sector. A key issue for the sector in the years to come will be the articulation between public authorities' willingness to accelerate the transformation of the economy towards 'net zero' on the one hand. On the other hand, they need to ensure energy security, which for the time being requires the use of fossil fuels.

- Increasing internet access and mobile telephony and rollout of 5G
- Increasing digitalization of businesses and organizations, driving innovation
- Connected devices' deployment offers growth opportunities
- Important opportunities to meet cybersecurity needs
- Strong innovation, with a notable acceleration in the field of artificial intelligence

- Demand saturation for some hardware electronics in mature markets
- Tougher regulatory environment in the future for Big Tech companies
- Strategic tensions between China and the United States
- High costs of research & development

RISK ANALYSIS SYNTHESIS

The COVID-19 pandemic accelerated digital transformation, encouraging investment in communication systems, cloud computing, cybersecurity, data analytics, and artificial intelligence (AI).

The November 2022 launch of ChatGPT, which showcased advances in generative AI, heightened interest in these technologies, anticipated to drive technology investments in 2024. Start-ups and large tech companies aim to leverage this boom, but the pressure to make these investments profitable is set to intensify.

Following a 9.4% dip in semiconductor sales in 2023, as estimated by WSTS, a rebound is projected for 2024. Investments in AI, automation, and digitization are poised to boost semiconductor demand, and the replacement cycle for pandemic-acquired electronic equipment may modestly contribute to sales recovery.

The demand for high-performance connectivity is expected to sustain 5G deployment and telecom growth. The USA, China, and South Korea have experienced rapid adoption. Europe's 5G subscription penetration is lower but steadily rising.

The primary challenges for the ICT sector are geopolitical and regulatory. American and Chinese big tech companies face heightened scrutiny, particularly regarding data protection, taxation, and anti-competitive behavior. New technologies, starting with semiconductors, are at the center of the Sino-American strategic rivalry. The development of AI, fraught with political, social, and economic risks, compels regulators to act; exemplified by the EU's December 2023 agreement on the AI Act, establishing a legal framework to regulate its usage.

METALS

Sector risk assessments

ASIA-PACIFIC	HIGH
CENTRAL & EASTERN EUROPE	HIGH
LATIN AMERICA	HIGH
MIDDLE EAST & TÜRKIYE	HIGH
NORTH AMERICA	HIGH
WESTERN EUROPE	HIGH

- Key sector in the energy transition and low carbon industrial strategies
- Strategic and high added-value sector (technological, geopolitical, etc.)
- High unexploited mining potential

- Procyclical sector vulnerable to macroeconomic trends
- Sector vulnerable to energy and electricity price inflation
- Long industrial and investment cycles detached from cyclical shocks
- Sector highly targeted by on-going strengthening of ESG (environmental, social and governance) norms

RISK ANALYSIS SYNTHESIS

In 2024, the prices of the main industrial metals should stabilize at relatively high levels, but well below the peaks reached in 2022. Indeed, 2023 was a year of falling metal prices. Copper will confirm this general trend, stabilizing at around USD 8500/t in the first half of 2024. We expect prices for the main industrial metals (copper, aluminum, and iron ore) to rise by around 2-5% in the second half of the year, except for zinc (-5%), where supply is outstripping demand.

Development in demand from the main client sectors (construction, automotive, energy) will be decisive for the sector, as will changes in the monetary policies of the world's leading central banks. The upward revision of China's growth prospects could also provide a 'silver lining' for the sector.

Overall, we expect a more positive situation for metals involved in the energy transition, particularly in the electrification of vehicle fleets and energy storage. On the one hand, it is benefiting from the dynamism of the electric vehicle segment; on the other, the Li-ion battery segment, and more broadly the energy storage segment, is receiving considerable subsidies from the American authorities and European institutions, partly to make up for their lag with Beijing. Indeed, while China leads the way in gigafactory projects currently underway (USD 129 bn), almost 75% of US investment under the *Inflation Reduction Act* will be devoted to gigafactory development (i.e. USD 64 bn).

PAPER

Sector risk assessments

ASIA-PACIFIC	MEDIUM
CENTRAL & EASTERN EUROPE	HIGH
LATIN AMERICA	MEDIUM
MIDDLE EAST & TÜRKIYE	MEDIUM
NORTH AMERICA	HIGH
WESTERN EUROPE	VERY HIGH

- Sustainable and recyclable (packaging)
- Increasing use of packaging paper due to the rise of e-commerce and increase of environmental rules

- Gradual replacement of graphic paper by digital media in view of the increasing use of digital technologies
- Packaging paper is highly vulnerable to global trade evolution
- Environmental issues (deforestation) and energy intensive

RISK ANALYSIS SYNTHESIS

2024 should confirm the difficulties encountered by the sector in 2023. Production costs remain higher than before the Russian intervention in Ukraine, and the drop in demand means that costs can no longer be passed on (as it was in 2022). The energy-intensive paper sector has been largely affected by the energy prices and production costs, whether for graphic paper or packaging.

These two components of the paper sector have increasingly distinct trends, with increasing digitalization on the one hand and the strengthening of e-commerce (packaging) on the other.

While it benefits structurally from the development of e-commerce and global trade, packaging paper will be paying for its still fragile growth in 2024, to which will be added increasingly stringent environmental considerations in Europe. At the end of 2023, the European Parliament adopted its position on the regulation on packaging and packaging waste, thereby initiating a negotiation process with the governments of the European Union (EU). Brussels is calling for progress in three key areas: a substantial reduction in «unnecessary» packaging, an increase in recycling capacity and the development of reuse. In concrete terms, European paper manufacturers will have to adapt their production facilities and their extended producer responsibility (EPR) strategies. This will require significant short- and medium-term investment on the part of companies, against a backdrop of tighter credit and falling activity. As a result, the impact on companies' viability and cash flow is likely to be considerable in the medium term, as regulatory pressure increases while their solvency deteriorates.

PHARMACEUTICALS

Sector risk assessments

ASIA-PACIFIC	LOW
CENTRAL & EASTERN EUROPE	LOW
LATIN AMERICA	MEDIUM
MIDDLE EAST & TÜRKIYE	MEDIUM
NORTH AMERICA	MEDIUM
WESTERN EUROPE	LOW

- High profitability of pharmaceutical and biopharmaceutical companies
- Strong ability to innovate
- Development of public health insurance schemes in emerging countries
- Strong government support via funding
- High overall barriers to entry favouring incumbents

- Increasing competition among generics producers
- Greater access to market for biosimilars
- Pressure from payers to lower drug prices
- Regulators paying closer attention to the health impact efficiency of new therapies

RISK ANALYSIS SYNTHESIS

Even though the sector faces several challenges, pharmaceuticals (pharma) remain one of the most resilient sectors. Indeed, this sector benefits from demographic and lifestyle changes which lead to greater consumption of medicines and to the development of public health insurance schemes throughout the world.

Nevertheless, various challenges highlighted by Coface before the COVID-19 crisis persist, although the improvement in profitability induced by vaccination campaigns fades. These include pressure from payers to lower reimbursement prices for medicines, criticisms from governments over the perceived lack of transparency in pricing, difficulties in the distributor segment, and litigation related to the effects side effects of medications or minimizing dependence on certain substances. This last point is particularly acute in the United States, where the consequences of the opioid epidemic on public health are worrying. Added to this are the actions taken by the US towards Chinese companies, in particular through the indictments of several company officials.

Finally, facing the loss of patents for profitable drugs, the sector must rebuild its portfolio of therapies. This generally happens through a significant and continuous effort in research and development. Another source comes from acquisitions of targets, particularly biotechs. However, the period when rates are higher and access to credit more difficult than before, can slow down not only these acquisitions, but also the development of these biotechs, whose economic model is capital-intensive.

RETAIL

Sector risk assessments

ASIA-PACIFIC	MEDIUM
CENTRAL & EASTERN EUROPE	MEDIUM
LATIN AMERICA	VERY HIGH
MIDDLE EAST & TÜRKIYE	HIGH
NORTH AMERICA	HIGH
WESTERN EUROPE	HIGH

- Long-term growth of the Chinese middle class
- Strong urbanisation in Asia and Africa, which will boost demand

- Strong competition between players in the sector
- Pro-cyclical sector, and therefore highly affected by the economic slowdown
- Fragility of physical retail outlets in the face of the development of e-commerce

RISK ANALYSIS SYNTHESIS

In 2023, the retail sector experienced difficulties that are likely to persist into 2024. Weak economic growth coupled with high inflation (albeit on the decline) and high interest rates are weighing on both consumers (by reducing their purchasing power) and retailers (by increasing their costs and reducing their ability to borrow). However, the situation differs from one region to another: in Europe, where economic growth fell sharply in 2023, retail sales fell by 2% year-on-year from January to October 2023; in 2024, the retail sector is likely to remain under pressure: economic growth in the European Union is expected to remain weak. In the United States, sales volumes rose by 2% year-on-year in September 2023, but are expected to fall in 2024 as a result of the country's economic slowdown. In China, retail sales rose by 7% year-on-year between January and November 2023 but are expected to slow in 2024, with GDP growth expected to slow to 4.3%.

E-commerce has been booming in recent years, benefiting greatly from the confines of the global health crisis. As a result, traditional retail players have been forced to adapt to this new mode of consumption. To face up to these challenges, they need to rethink their strategies, notably by stepping up the use of new digital tools and more efficient logistics systems.

- Development of fast fashion

- Polluting sector, with volumes threatened by the circular economy and targeted by the strengthening of ESG standards
- Pro-cyclical sector, impacted by declining global growth
- Energy-intensive production

RISK ANALYSIS SYNTHESIS

The textile-clothing sector has been hit hard by the economic slowdown, having already suffered the consequences of COVID-19. Coface forecasts a slowdown in global economic activity in 2024 (2.8% after 3% in 2023), which should weigh on clothing sales. This is due to households shifting their purchasing power to essential items such as food and energy. In addition, this energy-intensive sector is suffering from high energy costs.

This shock is not affecting all players in the sector symmetrically. Traditional Western retailers are falling back sharply in the face of the crisis and competition from fast fashion and second-hand clothing platforms. Asia, with its broad manufacturing base and expanding consumer base, is concentrating growth in the luxury and online retail segments.

Growing environmental concerns could weigh on the sector in the long term: cotton production requires the use of large quantities of water, and synthetic fibres are made from oil. In addition, the fast fashion business model is based on a high renewal rate for clothing, and therefore on high consumption of water and oil. However, consumer habits are still largely guided by price, both for new and second-hand clothes, regardless of environmental concerns.

NORTH AMERICA	HIGH
WESTERN EUROPE	VERY HIGH

- Technical progress contribution to cost reduction
- Highly concentrated maritime sector
- Long-term demand for main aircraft manufacturers driven by the need for mobility and the emergence of the middle classes in Asia

- Climatic events that can cause disruption to the maritime sector
- Sector closely linked to the economic cycle
- Political risk in the Red Sea that could lead to disruptions in the maritime sector

RISK ANALYSIS SYNTHESIS

After performing very well in 2021 and 2022 (because of high freight rates and the rebound in demand for goods after the lockdowns), shipping companies are expected to see their revenues decline in 2023. High energy costs and the slowdown in economic activity, will reduce demand for goods and therefore demand for freight. This will affect all types of transport (road, rail, air and sea). In addition, high energy costs will have an effect on the margins of companies in the sector: by increasing production costs and, in the longer term, the prices of new vehicles, as manufacturers are forced to pass on part of the increase in production costs to prices.

In line with Coface's forecasts, passenger air traffic has recovered in most regions following the lifting of mobility restrictions, but has not reached pre-pandemic levels. The number of commercial flights in 2022 increased but remained 10% below 2019 levels. Aircraft manufacturers Airbus and Boeing have benefited from a sharp rebound in orders during the recovery. However, the global economic slowdown and high energy costs are expected to reduce the number of orders in 2023.

In the longer term, the sector is expected to continue to benefit from the need for mobility, the emergence of the Indian and Chinese middle classes and the reduction in costs due to technical advances, particularly in the air and maritime segments.

Environmental concerns and measures to combat greenhouse gas emissions or pollutants could penalise the sector responsible for 23% of CO₂ emissions. However, these concerns could be a boon for vehicle manufacturers as transport companies are forced to renew their fleets.

MIDDLE EAST & TÜRKIYE	HIGH
NORTH AMERICA	HIGH
WESTERN EUROPE	HIGH

- This material is being promoted as part of the boom in «sustainable» construction, aimed at limiting environmental risks.

- Dependent on the construction and paper sectors, that are in difficulties.
- Pro-cyclical sector, therefore heavily impacted by economic slowdown
- Highly impacted by high energy costs
- Substantial costs associated with efforts by industry players to adapt to stricter wood harvesting regulations in order to preserve forests

RISK ANALYSIS SYNTHESIS

In 2024, the wood sector is expected to experience a slowdown, mainly due to the challenges faced by the construction sector. The contraction in global economic growth, particularly in the United States (with a growth forecast of 1.2% in 2024 compared with 2.4% in 2023 according to Coface), combined with high interest rates to combat inflation, will naturally lead to a reduction in demand for wood, as construction is its main customer sector.

Although wood has become more competitive than other energy sources, the possibility of substitution in the short term is limited by the need for specific equipment. The war in Ukraine and sanctions against Russia, a major world producer of wood, are affecting wood supplies, forcing companies in the sector to look for other sources, which is driving up prices.

In the long term, the sector could benefit from the tightening of ESG standards, as wood is partly renewable and its combustion emits little CO₂ (when wood is burned, it only releases the CO₂ captured during its growth, so this release is cancelled out if the trees cut down are replaced). However, the wood sector is vulnerable to global warming and increasingly frequent and violent natural disasters.

2024 OUTLOOK

- In 2024, growth will be underpinned by household consumption, which will benefit from the easing of inflationary pressures.
- Construction and tourism will continue to support economic activity, although there is a risk that European countries will slowdown.
- The current account deficit will remain high, with the surplus on services (tourism) and secondary income (remittances) insufficient to offset the massive trade deficit, largely due to imports of energy and capital goods.
- The Prime Minister, who enjoys a majority in the Assembly, will continue his fight against corruption and organised crime in order to join the EU, for which negotiations were opened in mid-2022.

2024 OUTLOOK

- Economic growth will stagnate, while oil production remains constrained by under-investment. The gas sector will continue to expand, thanks to strong demand from Europeans, who are stepping up their LNG investment projects.
- In the absence of a clear upturn in energy prices and a sharp rise in production, the current account surplus will shrink under the influence of stronger domestic demand.
- The social risk will remain contained thanks to the maintenance of subsidies in the run-up to the presidential elections at the end of 2024, aggravating the public deficit.
- Algeria continues to balance its relations with the West and Russia, which remains its preferred arms supplier.

2024 OUTLOOK

- Activity will accelerate modestly in 2024, reflecting a marginal increase in hydrocarbon production. Growth will come mainly from construction (Lobito rail corridor with DRC and Zambia) and the agricultural sector.
- Private consumption will remain weak, due to a resurgence in inflation linked to the gradual abolition of fuel subsidies, and the maintenance of a restrictive monetary policy (key rate at 17%).
- A reduction in social spending combined with the maintenance of public revenues, supported by high oil prices, could bring the budget balance back into surplus.

2024 OUTLOOK

- The libertarian Javier Milei took office as the new president in December 2023. He plans to tackle the economic crisis with drastic reforms (deep public spending cuts, shutting the central bank, dollarization). However, legislative opposition is likely to force him to moderate his approach.
- The economy will remain in recession through 2024, as consumption will be weighed down by massive fiscal tightening and still-substantial inflation. In addition, heightened political uncertainty will continue to hamper investment.
- Milei's plan to slash public spending quickly amid already high poverty is likely to lead to social tensions.

2024 OUTLOOK

- Benefiting less from the arrival of Russian companies and citizens with their capital, which caused a surprising rise in GDP in 2022 and again in 2023, through services and construction, the country's growth should moderate in 2024. This growth could be impacted by further clashes with Azerbaijan over Nagorno-Karabakh.
- The current account balance will remain negative, with demand for imported goods outstripping exports, and a slowdown in expatriate remittances (mainly from Russia).
- Despite increased military spending, the public deficit will remain modest and the public debt/GDP ratio below the 60% target.

- Significant mineral resources (gold, copper, molybdenum, zinc)
- Comfortable foreign exchange reserves and relative flexibility of the dram exchange rate
- Member of the Eurasian Economic Union (EAEU) and partnership agreement with the European Union (EU)
- Willingness to reform in terms of corruption, justice and competition

- Strong dependence on Russia (security, trade, expatriate remittances and FDI)
- Banking system still heavily dollarized, public debt denominated in foreign currencies
- High and persistent levels of poverty (27% of the population) and unemployment (13%)
- Armed conflict with Azerbaijan over the Nagorno-Karabakh enclave, which may lead to occasional clashes

AUSTRALIA

COFACE ASSESSMENTS	COUNTRY RISK	A2
	BUSINESS CLIMATE	A1

POPULATION Millions of persons	26.3
GDP PER CAPITA US Dollars	64,814

2024 OUTLOOK

- Cost-of-living pressures, higher interest rates and weaker growth of Australia's major trading partners will continue to weigh on domestic demand.
- Household consumption to weaken as disposal income is squeezed, but Stage 3 tax cuts could support income and consumption from mid-2024.
- Subdued economic growth should see a rise in unemployment.
- Private investment growth may soften. Construction sector should remain under pressure on weak demand for new housing and cash-flow issues.
- Consumer inflation will remain high and broadly based, with higher energy prices adding to price pressures.

- Geographic proximity to dynamic Asian economies, member of RCEP
- Rich endowment in mineral resources
- Moderate levels of public debt
- High tourism potential

- Exposed to commodity price volatility (specifically iron ore, coal and LNG)
- Economy remains dependent on Chinese demand
- Substantial household debt (183% of gross disposable income)
- Shortage of infrastructure due to the country's vast territory
- Vulnerable to climate change (bushfires and droughts)
- Disparity between federated states

2024 OUTLOOK

- The Austrian economy should slowly recover, supported by a noticeable decrease in the inflation rate together with a moderate increase of nominal wages that should push the purchasing power of private households.
- Robust tourism numbers should support economic growth as well.
- According to the current polls, the right-wing FPÖ (30%) should win the general election in October 2024 before the Social Democrats (SPÖ, 24%) and the Christian Democrats (ÖVP, 20%). If the other parties want to avoid an FPÖ-lead government, they have to step out of their comfort zone and form the very first three-party coalition including the SPÖ and ÖVP.

- Well-endowed sovereign wealth fund thanks to hydrocarbon production and the state's position as a net external creditor
- Significant gas potential in the Caspian Sea
- Launch of gas exports to Europe via Türkiye and Greece in late 2020
- Strategic position between Europe, Russia and China

- Low economic diversification, high dependence on hydrocarbons (50% of GDP, 90% of exports and ~66% of tax revenues), declining oil resources
- Fragile, opaque and dollarized banking system, underdeveloped credit
- Corruption, low competition, repression, politicised judiciary
- Armed conflict with Armenia over Nagorno-Karabakh
- Low population growth and ageing

BAHAMAS

COFACE ASSESSMENTS	COUNTRY RISK	B
	BUSINESS CLIMATE	A4

POPULATION Millions of persons	0.4
GDP PER CAPITA US Dollars	32,299

2024 OUTLOOK

- Growth will be held back by the slowdown in domestic consumption and tourism from the USA but will be supported by FDI in tourism construction.
- Broadening the tax base, improving tax collection, and controlling spending will reduce the public deficit, assuming a moderate slowdown in local US consumption.
- Political stability is set to continue until the 2026 elections, with a large majority for the center-left Progressive Liberal Party, led by Prime Minister Philip Davis.
- Popular discontent will be fuelled by high crime rates and inflationary pressures.

- Well-established tourism sector, benefiting from proximity to the North American market
- International banking and financial services center
- Institutional stability

- Dependence on tourism (around 50% of GDP and 70% of workforce) and on the United States (tourism, trade, USD peg)
- High exposure to natural disasters and the effects of climate change
- Insularity and small size: dependence transport, food and energy imports, leading to a large current account deficit
- High public debt
- High crime rate, particularly associated with drug trafficking
- Considered a tax haven, subject to increased scrutiny: added to EU list in October 2022

BAHRAIN

COFACE ASSESSMENTS	COUNTRY RISK	D
	BUSINESS CLIMATE	A4

POPULATION Millions of persons	1.5
GDP PER CAPITA US Dollars	28,781

2024 OUTLOOK

- Bahraini growth is expected to remain firm in 2024, mainly on higher energy prices, easing monetary policy and stronger growth in exports.
- In 2024, increasing hydrocarbon prices will result in a wider current account surplus.
- Oil prices on the spot market stand well below the fiscal breakeven oil price for Bahrain, estimated at USD 126 per barrel, which will continue to weigh on the fiscal balance.
- No major political tension is expected in the short-term. In the longer term, the political scene seems complicated due to the feeling of the Shia population of being marginalised in political and economic terms.

- Solid banking sector, developed financial hub
- More diversified economy compared with its GCC neighbours
- Large aluminium exports, making Bahrain the eighth largest exporter in the World
- Support of other Gulf countries, and hydrocarbon revenues

- High fiscal and external breakeven oil prices
- High level of public debt
- Fiscal and export dependence on oil and aluminum sales, exposure to volatility in commodity prices
- Instable political landscape

2024 OUTLOOK

- Growth should decelerate in FY2024 due to external sector challenges and persistent (albeit diminishing) inflationary pressures impacting private consumption.
- Exports will remain buoyant, but the sluggishness of the European economy may affect the sector.
- Tight monetary policy will hamper the economy by impacting private investment.
- The current account deficit to narrow marginally, supported by an increase in remittances and a moderate growth in exports.

- Competitive garment sector
- Substantial remittances from expatriate workers (mainly from Gulf States)
- International aid helps to cover financing needs
- Moderate level of public debt
- Favourable demographics
- Improving financial inclusion through micro-finance and mobile services

- Economy vulnerable to changes in global textile sector and developments in GCC countries
- Very low per capita income
- Recurring and growing political, religious and social tensions
- Business climate shortcomings; lack of infrastructure
- Recurring natural disasters result in significant damage and crop losses
- Weak banking sector

2024 OUTLOOK

- The continuing recovery in tourism should continue to support activity, but it will remain dependent on the slowdown in the UK, the US and Canada.
- Fiscal consolidation efforts under the aegis of the IMF, notably the reform of state-owned enterprises, are helping to reduce the public deficit. As a result, public debt will remain on a downward trajectory.
- The positive impact of tourism on the current account deficit will be largely wiped out by the rise in imports linked to the rebound in consumption and investment.
- Following her party's landslide victory in the general election, Prime Minister Mia Mottley began her second term in January 2022.

- Popular tourist destination
- Growing reputation as an international centre for financial services
- Strong institutions for effective governance
- High foreign exchange reserves (nearly 7 months of imports)
- Member of CARICOM

- Dependence on tourism, particularly from the UK, USA and Canada
- Exposed to the effects of climate change and hazards, as well as the volcanic activity of La Soufrière on the neighbouring island of St Vincent
- Dependence on imports of food, equipment and energy, accentuated by insularity
- High unemployment (over 9% by mid-2022), widespread poverty
- Despite some progress on transparency, jurisdiction under FATF supervision

2024 OUTLOOK

- Growth will moderate in 2024, after recovering in 2023 (partly due to a base effect). Growth will be driven by household consumption and investment, while net exports will have a negative impact.
- Import restrictions and the depreciation of the rouble will exert upward pressure on inflation, despite the government's price controls.
- European sanctions and Russia's deteriorating economy will have a negative impact on the current account balance.
- The budget balance will remain negative: the expected increase in revenues will not be enough to offset the rise in spending, particularly on defence.

- Member of the Eurasian Economic Union
- Relatively well trained and skilled workforce
- Large industrial (33% of GDP in 2022) and agricultural (8% of GDP) sectors
- Little inequality and poverty is rare

- High economic (energy, trade and financial) dependence on Russia
- Low geographical and sectoral diversification of exports
- State plays a massive role in the economy
- Poor governance (high corruption, weak legal system, institutional rigidity, absence of pluralism)
- Monetary policy is not independent, the central bank reports directly to the President
- Shrinking labour force

2024 OUTLOOK

- The Belgium economy proved to be very resilient as the automatic indexation of wages balanced out the high inflation rate and kept the purchasing power of private households stable.
- In 2024, private consumption should remain a key driver for economic growth as well as foreign trade.
- Public deficit will remain elevated due to the wage adaption of public employees and social benefits.
- After the election in June 2024, it should take a long time to form a coalition and probably result again in the wide "Vivaldi-coalition" out of seven parties, to keep the extremist parties out of power.

- Optimal trade-strategic location between the United Kingdom, Germany and France
- Ports of Antwerp (second-largest in Europe) and Zeebrugge
- Presence of European institutions, international organisations and global groups
- Well-trained workforce thanks to vocational education, multilingualism

- Political and financial tensions between Flanders and Wallonia
- Complex institutional structure and multiple administrative levels
- Very dependent on the Western European economy: exports of goods and services = 86% of GDP, of which almost 60% go to the rest of the EU
- Exports concentrated on intermediate products
- Heavy public debt

2024 OUTLOOK

- Growth will be underpinned by the continued recovery in tourism, with arrivals expected to return to pre-pandemic levels, helped by the development of infrastructure. It will nevertheless be subject to the slowdown in the United States, the main market and source of tourists and investment.
- The current account deficit is likely to shrink only moderately, as the rise in tourism receipts is offset by the increase in tourism-induced imports.
- Continued fiscal consolidation will limit the public deficit, without remedying the weakness of fiscal resources. Debt servicing remains high, even though its partial restructuring in 2021 has reduced its cost.

- Competitive tourist industry
- Agricultural resources (sugar cane, citrus fruit, bananas), aquaculture and fisheries
- Mining potential (gold, bauxite, baryte, cassiterite)
- Support from international and bilateral lenders
- Currency pegged to the dollar
- Comfortable foreign exchange reserves

- High level of debt, limited access to international markets
- Underdeveloped manufacturing sector leading to dependence on imports, particularly energy imports
- Non-diversified exports (cane sugar, bananas, shrimps, cigars, fruit juices)
- Exposure to climatic events
- Dependence on tourism
- High level of crime, with drug trafficking, money laundering and corruption as a backdrop
- Public under-investment in infrastructure

2024 OUTLOOK

- Growth will remain strong, driven by public spending (construction: extension of Cotonou port, energy, sanitation, Glo-Djigbé industrial zone), cotton and transit activity. Inflationary pressures will ease, supporting private consumption.
- A reduction in the public deficit is expected, in line with the reduction in fuel subsidies and the broadening of the tax base, while military spending is likely to remain high due to the increased jihadist threat in the north.
- The erosion of democratic standards under President Patrice Talon could lead to political unrest in a fragile social context.

- High growth potential, based in particular on tourism, transit trade and improved agricultural yields
- Support from multinational organizations and bilateral partners
- Strategic position (access to the sea for hinterland countries: commissioning of a 2,000 km pipeline from Niger to Benin)
- Effective structural reforms: investment and fiscal consolidation

- Poorly diversified economy (exports based on cotton, cashew nuts and re-exports, and imports of energy and food)
- Weak governance: corruption, bureaucracy, political and judicial arbitrariness
- High poverty rate (47%), high level of underemployment (70%) and large informal sector
- Insecurity in the north due to Islamists

2024 OUTLOOK

- Exports will weigh on growth in 2024. Soybean exports may suffer from El Niño and declining prices. Buyers of natural gas (Brazil, Argentina) will increasingly turn to alternative sources.
- Private consumption and investment will still benefit from high public spending.
- The low foreign exchange reserves and distrust could force a departure from the dollar peg, exposing the country to a debt crisis and increased inflation. The Central Bank is buying gold to exchange for dollars.
- Government efficiency will be hindered by the internal rift within the ruling left-wing party, until the general elections in 2025.

- Significant mineral resources (natural gas, gold, zinc, silver, tin, lead, lithium reserves) and agricultural resources (soy, quinoa)
- 15th largest global exporter of natural gas
- Member of the Andean Community and an associate member of Mercosur
- Tourism potential
- Boliviano currency pegged to the U.S. dollar

- Economically undiversified, reliant on imports of fuels and equipment, and dependent on commodity prices
- Low development of the private sector and a strong reliance on the public sector
- Significant informality
- Poor business environment, characterized by insecurity, drug trafficking, and corruption
- Risks of social unrest in a politically polarized country
- Limited access to external financing
- Risk of a balance of payments and/or debt crisis

2024 OUTLOOK

- In 2024, growth will be underpinned by public investment, particularly in large-scale infrastructure projects such as the Vc Corridor motorway that will link the north and south of the country.
- Despite the moderation in inflation, private consumption will weaken as remittances from expatriate workers fall in line with the reform of European countries.
- The fall in exports of goods (aluminum, electricity) and services (tourism), also linked to the sluggishness in Europe, will weigh on growth.
- Discord between the Bosnians, Croats and Serbs will delay negotiations for EU membership, which were opened at the end of 2022.

- Significant transfers from expatriate workers
- Currency pegged to the euro
- EU candidate status since 2022
- Tourism (12% of jobs and 10.5% of GDP in 2019) and hydroelectric potential (34.5% of electricity generated)
- Member of various trade agreements, including CEFTA, the regional common market for 6 Balkan countries
- Wage competitiveness

- Institutional, regulatory, economic and community fragmentation, secessionist tendencies
- Lack of public investment
- Corruption, defective rule of law
- High emigration, lack of skilled workforce
- Large informal sector (estimated at 1/3 of GDP), low labour force participation (50%), high youth unemployment (1/3)
- Dependence on external financial assistance

2024 OUTLOOK

- Growth will be more dynamic, driven by the mining sector. Although it will continue to be dominated by diamonds, it will benefit above all from the rise in copper production.
- The public deficit is expected to fall, thanks to a fiscal consolidation plan that includes a reduction in the government wage bill and a redefinition of public investment priorities.
- Solid institutions should ensure that the next elections in 2024 run smoothly. Although social frustration, fuelled by inequality and unemployment, will erode support for the Botswana Democratic Party, which has been in power since the country's independence, the party is expected to retain its majority.

GDP PER CAPITA US Dollars		9,455

2024 OUTLOOK

- GDP will weaken in 2024 as the lagged effects of tight credit conditions are expected to weigh on the Brazilian economy, even as the central bank continues to cut interest rates.
- Although estimates for the 2023/24 grain harvest point to another record production, the expected slowdown in the Chinese economy should lead to weaker tailwinds from exports.
- President Lula's administration managed to push through important fiscal reforms in the Congress. However, the approval of revenue-increasing measures in 2024 is key to the success of the government's fiscal adjustment strategy.

- Varied mineral resources and agricultural harvests
- Large population (estimated at 212.6 million)
- Well-diversified industry
- Strong foreign exchange reserves
- Net creditor in foreign currency

- Sensitive fiscal position
- Infrastructure bottlenecks
- Low level of investment (roughly 16% of GDP)
- High costs of production (wages, energy, logistics, credit) that harm competitiveness
- Shortage of qualified labour, inadequate education system

2024 OUTLOOK

- The economy is expected to continue slowing affected by stagnating household consumption and tightened monetary policy.
- The domestic economy is subject to the ongoing tightness of the labour market, confirmed by employee shortages and vivid wage growth.
- Fiscal revenues are expected to weaken because of subdued economic activity but could be supported by reversing energy related measures and improved collection.
- The latest elections resulted in a coalition majority of centre-right GERB and PP-DB. Nonetheless, the political situation could suffer from political polarisation in the current coalition.

- Diversified productive base (Bulgaria is a large producer and exporter of cereal and mostly independent of food imports from abroad)
- Low public debt
- Tourism potential
- Low production costs and good price competitiveness
- Monetary stability, the Bulgarian Lev is in a peg with the Euro

- Corruption and organised crime (No. 72 in the Corruption Perception Index 2022)
- Inefficient public services and judicial system
- Fragmented political landscape makes the implementation of a stable government complicated
- Lack of skilled labour
- Declining and relatively poor population with the lowest GDP per capita in the EU
- Strong informal economy

2024 OUTLOOK

- After two coups d'état in 2022, and with the presence of jihadist groups in part of the country, the political and security context is fragile and social tensions are high. The holding of the next elections, expected in July 2024, could be compromised.
- While agriculture, services and mining will underpin growth, it will remain subject to political and security instability.
- The public deficit will be reduced associated with more dynamic activity and as part of the fiscal consolidation in line with the IMF programme. Defence and security expenditure will be lower but will still penalise public finances.

2024 OUTLOOK

- In 2024, activity will be sustained by the recovery of the mining sector, while the publication of a new Code in June 2023 should encourage the return of foreign investors.
- The compression of imports due to low foreign exchange reserves and the size of the black market will contribute to high inflation, which will accentuate the high humanitarian needs.
- The current account deficit will remain massive, with export earnings insufficient to meet the country's dependence on food and energy imports.
- Respect for human rights by President Ndayishimiye's authoritarian regime will be a key factor in the long-term return of international aid.

- Subsoil wealth (rare earths, nickel) largely unexploited
- Agricultural potential (coffee, tea)
- Potential gains in agricultural productivity

- Fragile political institutions in a country marked by ethnic conflicts, attempted coups, a strong military presence and authoritarianism
- Low productive capacity and subsistence farming
- Landlocked location and lack of road and health infrastructure
- Corruption and ineffective economic policy
- Widespread extreme poverty
- Dependence on international aid and recent end to diplomatic and financial isolation
- High risk on debt and external accounts

2024 OUTLOOK

- In 2024, activity will continue to be sustained by the tourism sector, even though there is a risk that the slowdown in European countries will weight.
- Growth will also benefit from investment (ports, hotels, renewable energies) and the high level of remittances, which will boost household consumption.
- Agriculture will continue to be held back by the persistent drought, which is causing sharp falls in production.
- The pegging of the escudo to the euro and the moderation in energy and food prices will help to reduce inflationary pressures.
- Despite the cohabitation, no major political tensions are expected.

- Stable political institutions
- Exchange rate cooperation agreement with Portugal, guaranteeing convertibility and a fixed rate with the euro, and a credit facility
- Fishing reserves with the sale of fishing licences
- Efficient banking and telecommunications services
- 20% of the country's energy consumption currently comes from solar panels and wind turbines, with a target of 50% by 2030

- Weak economic diversification and dependence on tourism
- Insularity: dependence on food imports and energy products
- Ageing infrastructure and bureaucratic administration
- High dependence on the economic performance of the euro zone (tourism, remittances)
- Very high public debt
- Exposure to climate change and volcanic, seismic and cyclonic risks

2024 OUTLOOK

- The economy is set to slightly accelerate in 2024, constrained by subdued global demand. It is particularly vulnerable to recession risk in the US.
- The National Bank of Cambodia (NBC) will remain pressured by the Fed, which is likely to keep interest rates at elevated levels. Therefore, the NBC may continue to intervene in foreign exchange markets to support the managed peg of the riel to the USD.
- Public and current deficit should narrow, although the latter will remain elevated
- No major political changes are expected after Hun Manet took power in August 2023, following the appointment of his father, former Prime Minister Hun Sen.

- Financial support from bilateral and multi-lateral donors
- Dynamic tourism sector with strong potential
- Increasing regional integration
- Young population

- Economy vulnerable to weather conditions
- Dependence on imports of energy, capital goods and intermediate goods
- Great reliance on garment and tourism
- Underdeveloped electricity and transport networks
- Low-value added garment exports
- Dependence on imports of energy, capital goods and intermediate goods
- Significant governance shortcomings, high levels of corruption
- Elevated poverty rate, low health and education spending
- Limited capacity of the only international seaport of Sihanoukville

2024 OUTLOOK

- The expansion of gas and mining activities will support growth and offset the decline in the oil sector.
- Fiscal consolidation continues under an IMF programme.
- The current account deficit will narrow as gas and then mining exports increase.
- Clashes in the English-speaking separatist regions are continuing, maintaining a climate of violence and instability.
- Yaoundé is diversifying its alliances, dealing with Russia as much as France and others.

- Relatively diversified resources, with forestry, agriculture (e.g. cocoa and bananas) and oil; mineral potential
- Short-term expansion of gas capacity
- Hydroelectric potential
- Efforts to improve infrastructure underway
- CFA franc pegged to the euro

- External and public accounts dependent on commodity prices
- Low public revenues
- Mature oil fields
- Non-inclusive growth (extreme poverty), difficult business environment and poor governance (corruption, smuggling, etc.)
- Increased political risk: insecurity in the far north of the country and tensions in the two English-speaking regions of the north-west and south-west, succession of President Biya

2024 OUTLOOK

- Interest rates will continue to constrain household and business spending. The US slowdown should also weigh on exports.
- With inflation returning to target and activity moderating, the Bank of Canada could begin cutting its key rate in the spring of 2024.
- The government remains committed to increasing public spending on housing and clean energy, maintaining the budget deficit.
- Although losing ground in the polls, the minority government of Justin Trudeau (Liberal Party) should remain in power until the 2025 election, thanks to the support of the NDP.

2024 OUTLOOK

- In 2024, growth will be underpinned by exports thanks to the still high prices of gold and diamonds.
- The outlook is nonetheless subject to developments in the highly precarious security situation and the supply of fuel.
- Fights between the government, helped by mercenaries from the Wagner group, and rebel groups will continue, reinforced by President Touadéra's plan to reform the constitution, which will be accepted in a referendum in July 2023.
- The USD 191 million Extended Credit Facility granted by the IMF in May 2023 will help finance the priority public services needed to mitigate the effects of food insecurity.

2024 OUTLOOK

- Growth will be driven by defense spending and cotton and gold production. However, it will slow due to the Sudanese conflict and a drop in FDI in oil, whose revenues will be reduced by the nationalization of the main assets in March 2023.
- The repression of the opposition and the constitution adopted by referendum at the end of 2023 will aggravate political and social tensions. However, Mr. Déby is expected to retain the presidency in the elections scheduled for late 2024.
- Regional instability, amplified by the coup d'état in Niger and the crisis in Sudan, will continue to have a negative impact on security, the economy and humanitarian aid.

2024 OUTLOOK

- Growth will slightly progress in 2024, aided by mining exports benefiting from global investment in renewable energies.
- While consumption will rebound with receding inflation and credit easing, investment will remain below standard due to reforms affecting the lithium sector (nationalization) and copper sector (taxes).
- El Niño could once again impede production and exports of mining and agricultural goods in the event of new floods.
- A rejection of the constitutional reform proposal, as indicated by November 2023 polls, would not diminish the opposition between the executive and the Congress.

2024 OUTLOOK

- Growth outlook to slow in 2024 as China faces formidable headwinds, including the housing sector crisis, and weakened confidence.
- Structural factors could limit the extent of growth recovery.
- China expected to announce more extensive support measures to shore up growth.
- Restoring confidence among households and private enterprises is critical in the longer term for turning the slowdown around.
- Economic slack and lower local commodity prices will hold down inflation, allowing PBOC to maintain supportive policy stance.

2024 OUTLOOK

- Economic growth will remain weak through 2024 as the combination of high real interest rates and sticky inflation is expected to restrain private consumption and gross fixed investment.
- Risks for agriculture associated with El Niño and higher domestic fuel prices could put further pressure on inflation and lead the central bank to embark on a very slow cycle of rate cuts through 2024.
- Following a massive victory for opposition candidates in the 2023 regional elections, the government of leftist Gustavo Petro may face further pressure to water down structural reforms in Congress.

- Ports on two oceans
- Large population (almost 50 million people)
- Plentiful natural resources (coffee, oil and gas, coal, gold)
- Significant tourism potential
- Large foreign direct investment level

- Shortcomings in road and port infrastructures due to historically low levels of investment and difficult topography
- Problematic security situation because of drug trafficking and illegal mining. Government's initiative to pacify the country through dialogue with armed groups has yet to take off.
- Structural unemployment, poverty and inequality, deficient educational and healthcare systems
- Dependence on commodities, narrow manufacturing

2024 OUTLOOK

- Minerals will drive growth thanks to Chinese demand and investment, with increased copper mining (expansion of the Kamo-a-Kakula mine).
- Tight monetary policy, low food prices and moderate currency depreciation (high mineral prices) will dampen inflation.
- Conflict in the east of the country will curb non-mining investment and inflate security and humanitarian spending. Deficits will be financed by the IMF Credit Facility, other concessional loans and FDI.
- The December 2023 general elections were held in a tense political and security context.

2024 OUTLOOK

- Growth will be driven by commodity exports, buoyed by high prices, oil investments and gas development, with the start of LNG production from the Marine XII offshore block. It will also benefit from the expansion of the agricultural sector.
- Consumption will continue to be penalized by extreme poverty and high prices for imported food and gasoline.
- Despite development spending and the clearance of domestic arrears, the public surplus will improve slightly thanks to oil revenues and lower fuel subsidies. Guided by the IMF, the country will pursue fiscal consolidation and debt sustainability.

- Abundant natural resources (oil, gas, iron ore, timber, potash) and agricultural potential
- Comfortable current account surplus based on raw materials
- Strategic position in Central Africa

- Very high public debt
- Dependence on oil (50% of GDP) and its price
- Maturity of several oil fields
- Widespread extreme poverty, no equitable distribution of oil windfall
- Authoritarian regime, laborious public policies and risk regarding the presidential succession
- Under-investment in transport, health and education
- Low attractiveness to foreign investment outside the extractive sector due to poor governance (corruption)
- Exposure to climate change may hamper agricultural development

2024 OUTLOOK

- Growth is likely to moderate as the rebound in consumer spending, linked to improved labour market conditions and lower inflation, fades. Activity will also be affected by the expected slowdown in the United States, although the continuing recovery in tourism will support exports.
- Fiscal consolidation will continue. The reform of public employment, aimed at reducing the state wage bill, will enable spending to be cut.
- President Chavés remains popular with voters, as economic conditions have improved (lower inflation, stronger fiscal position) since he took office.

2024 OUTLOOK

- Growth will remain comfortable, driven by industrial activity and public investment (construction of a metro in Abidjan). Oil and gas production will underpin activity, with the commissioning of the new offshore field (Baleine project).
- A reduction in deficits is expected, with the decline in subsidies, the improvement in the tax base following the new IMF program, and the rise in hydrocarbon exports. Imports will remain high due to the need for capital goods.
- The political climate is improving after the post-election violence of 2020, thanks to the reforms implemented (compensation process for victims).

2024 OUTLOOK

- In 2024, growth will benefit from the resilience of the tourism sector, bolstered by the country's entry into the Schengen area, although the lack of reform in European countries is likely to weigh.
- Private consumption will be boosted by the dynamism of tourism, the slowdown in price rises and by wage gains linked to persistent labour market shortages.
- The current account deficit will be maintained, with the surplus on services (tourism) more than offset by imports of goods.
- Relations between President Milanovic (SPD) and Prime Minister Plenkovic (HDZ) will remain tense in the run-up to the parliamentary and presidential elections in mid and late 2024.

2024 OUTLOOK

- The modest economic recovery will continue, hampered by inflation impacting private consumption, a shortage of foreign currency aggravated by US sanctions, and low tourist numbers constraining exports.
- Debt rescheduling under an agreement with the Paris Club will ease the burden of debt, but access to international financing will remain limited.
- Despite its grip, President Miguel Díaz-Canel's Communist Party, re-elected in April 2023, faces popular discontent.
- At a time when Mr. Díaz-Canel's Communist Party is facing popular discontent, Plan 2024 for economic stabilization will exacerbate social tensions. Including the end of general subsidies and an increase in the price of public services, it will change the Cuban economic model.

2024 OUTLOOK

- The Cypriot economy will post a small rebound, with consumption still supported by the by partial wage indexation, a strong labor market and easing inflation, and investment supported by European funds
- A real-estate market subdued by high rates, as well as a slowdown in tourism (still suffering the loss of Russian and Ukrainian visitors), will be the main headwinds
- Fiscal consolidation will continue, boosted by stronger VAT incomes, the phasing out of pandemic and energy crisis measures, and improved collection of corporate taxes.
- Banking health has improved significantly, though it will start to endure mortgage delinquencies

- Central geographical location between Europe, the Middle East and Africa favours the transshipment industry
- Offshore finance business services, and trans-shipping hub
- Rich, unexploited offshore natural gas deposits
- Skilled, English-speaking workforce

- Island divided between the EU-aligned Republic of Cyprus and Türkiye-aligned Turkish Republic of Northern Cyprus
- Strong links to Russia, Ukraine and the UK through financial and trade interdependence (tourism, finance, professional services)
- Slow legal process, poor enforcement of contracts
- Heavy debt load for the state, banks, companies, and households
- Weak industrial diversification (tourism, construction, natural gas, finance)

2024 OUTLOOK

- The Czech economy will rebound from recession but GDP growth in 2024 will remain below pre-pandemic levels.
- Gradually household consumption is expected to recover, thanks to increasing real disposable income because of falling inflation and an expected series of interest rate cuts.
- Industry lost its resilience and will suffer from the deterioration as long as its main trading partner, Germany, experiences weak economic activity.
- The ruling coalition consists of five parties, while the latest polls indicate strong support for ANO, the main opposition party, for the next parliamentary elections scheduled for October 2025.

- Central geographic location at the heart of industrial Europe
- Tightly integrated in the international production chain, and more particularly the German one
- Preferred destination for FDI in Central Europe
- Significant industrial potential
- Robust public accounts and banking system

- Small, open economy
- Dependent on European demand, particularly Germany
- High foreign intermediate inputs in exports and low contribution of services to local value-added in exports
- Automotive sector occupies a large share of the economy
- Lack of rapid transport links with the rest of Europe
- Ageing population and shortage of skilled labour

2024 OUTLOOK

- A slowdown in inflation and positive real wage growth along with a strong labour market will support an improvement in household consumption in 2024.
- High interest rate levels will continue to affect business activity with cost of debt challenging margins and reduce investments. Corporate insolvencies continue to be high, albeit slowing down.
- Exports are slowing down with the effective exchange rate relatively strong and important sectors, such as offshore wind and shipping, are weakening.
- The current government is generally stable and given their current unpopularity (currently polling around 33%) unlikely to call an early election for the time being.

2024 OUTLOOK

- Growth will be accelerated by rising exports and public and private investment. It will also be underpinned by private consumption, stimulated by monetary easing and expatriate remittances.
- Electoral spending (infrastructure, police, and subsidies) will offset fiscal consolidation efforts.
- Luis Abinader looks well positioned for re-election in May 2024, given his victory in the October 2023 primaries and a November 2023 Gallup-RCC Media poll giving him a 64% approval rating.
- The authorities' main concerns will continue to be insecurity and the tightening of the immigration blockade on the border with Haiti.

2024 OUTLOOK

- In 2024, economic activity will be hampered by adverse weather conditions linked to El Niño, with the agriculture, marine and oil sectors expected to be the hardest hit.
- Fiscal situation should remain challenging, as slowdown in activity will lead to revenue losses that will widen fiscal deficit. In addition, the ban on oil drilling in ITT oil field will aggravate this outlook.
- President Noboa has managed to build a majority in the National Assembly, but the coalition doesn't seem stable as ideological differences might emerge ahead of 2025 general elections.

2024 OUTLOOK

- Inflation and interest rates will weigh on consumption and investment.
- Public spending, excluding interest and subsidies, will remain constrained. Foreign trade will make a slightly positive contribution, as the compression of imports due to the shortage of foreign currency and the devaluation of the pound will outweigh the misfortune of tourism and LNG sales.
- The public deficit will worsen, and the duality of the exchange rate will persist. Nonetheless, the IMF could release its credits, particularly in view of the country's role in the conflict between Israel and Hamas. This would ease the pressure on the balance of payments, without generating too much popular discontent.

2024 OUTLOOK

- Public finances will remain under pressure, with public debt remaining on an unsustainable path and high debt servicing costs generating substantial financing requirements.
- The moderate economic slowdown will stem from the deceleration in export growth and remittances from the United States, impacting private consumption.
- The improved security situation will stimulate tourism, reducing the current account deficit.
- In the run-up to the presidential elections in February 2024, the popularity of President N. Bukele's and his success in the fight against crime increase his chances of winning, despite a constitutional ban on standing for re-election.

- Relative economic diversification
- Free trade agreements with Central America, the United States, Mexico, the European Union, Guatemala, Honduras and South Korea
- High population density

- Vulnerability to climate and seismic activity
- Insufficient infrastructure and investment
- Dependence on the United States (investment, trade, and remittances)
- Lack of independent monetary policy
- Limited access to multilateral financing
- Structurally weak public and external accounts
- High levels of inequality and poverty
- Introduction of Bitcoin has shaken market and investor confidence

2024 OUTLOOK

- After two years of recession, caused by the war in Ukraine and the Nordic sluggishness, economic activity will slowly pick up again in 2024. It will be underpinned by the NICTs and by the recovery in private consumption, helped by the gradual fall in inflation and the improvement of real wages.
- Tax and VAT increases and the gradual phasing-out of energy support measures will offset the permanent rise in defense spending and social transfers.
- Bolstered by the 2023 parliamentary elections, Prime Minister Kaja Kallas will continue to lead a tripartite coalition, but is weakened by her husband's links with Russia.

2024 OUTLOOK

- Although hampered by South Africa's slowdown, growth will be underpinned by exports, which will benefit from the depreciation of the lilangeni and the rise in agricultural and manufacturing output, particularly beverages and dairy products.
- The high level of SACU transfers will enable the government to increase its spending on public investment, particularly in the construction sector.
- Social tensions, fuelled by poverty and inequality, will continue to be exacerbated by frustration with the absolute monarchy and its restrictions on civil liberties, further illustrated by the sham parliamentary elections in 2023.

2024 OUTLOOK

- In the wake of the civil war in Tigray, the country is weakened by insurgencies in the Amhara and Oromia regions.
- In 2024, growth will be driven by reconstruction, public consumption and investment in finance, telecommunications, and energy. However, political instability and inflation will curb household demand.
- At the end of 2023, Ethiopia defaulted on the payment of \$33 million in interest on an international government bond. It will therefore continue its debt restructuring negotiations, with a view to reaching an agreement with the IMF.

2024 OUTLOOK

- Economic growth should be robust in 2024, supported by tourist arrivals and an increase in budget spending in FY2024.
- Recovery in tourism will keep unemployment low, supporting private consumption.
- The current account deficit is expected to narrow thanks to increasing remittances and higher tourism receipts.
- The fiscal deficit and public debt ratio are projected to decrease, thanks to higher government revenue driven by the tourism sector.
- Risks are adverse weather conditions, skilled labor shortages, and high global commodity prices.

2024 OUTLOOK

- With a high usage of variable interest rates, households are feeling the brunt of rising rates which are and will continue to negatively affect consumption in 2024.
- Falling inflation in 2024 is expected to ease and will eventually start to support domestic demand in the latter half of the year.
- The housing market is experiencing a sharp downturn with falling demand due to the interest rate environment. Falling interest rates will help the sector.
- The current government is still planning to limit the fiscal deficit. This will include expenditure cuts, some higher taxes and other reforms, but this will in the short-term still result in a rising debt-to-GDP ratio.

Main Economic Indicators

2024 OUTLOOK

- While household consumption should rebound slightly, thanks to the slowdown in inflation and the firmness of wages, business investment will be affected by the still restrictive monetary policy.
- Against a backdrop of high costs (wages, interest rates) and lacklustre demand, corporate insolvencies - which exceeded their pre-COVID level in 2023 - will continue to rise.
- In the absence of an absolute majority for President Macron, the risk of political instability is significantly increased. The risk of social tensions is also high.

2024 OUTLOOK

- Despite the coup on 30 August 2023, growth will be maintained in 2024, mainly supported by oil exports, which will benefit from high prices, but also timber and manganese exports, despite a possible drop in FDI following the coup.
- The resurgence of twin deficits is linked to the drop in oil revenues compared with 2022.
- Following the controversial re-election of Ali Bongo Ondimba, in office since 2009, General Brice Oligui Nguema seized power with the help of part of the army. The transitional government has announced that free elections will be held mid-2024, and that the country's domestic and foreign commitments will be respected.

2024 OUTLOOK

- Growth will return to normal in 2024, supported by investment and tourism. It had moderated in 2023 after the recovery in tourism and then the boost to services and construction following the arrival of the Russians.
- Inflation moderated in 2023, due to the slowdown in world goods prices, the appreciation of the lari and a restrictive monetary policy. It will remain close to the Central Bank's target (3%) in 2024.
- The current account deficit will remain similar to 2023, after a widening of the trade deficit and a reduction in expatriate remittances.
- The fiscal deficit will improve slightly, thanks to an increase in tax revenues.

- Tourism, agricultural, mineral and hydroelectric potential (near self-sufficiency in electricity)
- Strategic geographical position between Central Asia, Russia, Europe and Türkiye
- International support, numerous trade agreements
- Relatively good business environment

- Weak diversification of the economy, low manufacturing activity (11% of GDP in 2022) and low productivity of agriculture (7% of GDP in 2022)
- Structural trade deficit and low export valuation
- Highly dollarized banking system (59% of deposits and 47% of credits in 2022)
- High poverty, informal economy and rural population
- Political instability: pro-Western/pro-Russian division, Abkhazia and South Ossetia occupied by Russian military forces

2024 OUTLOOK

- Stronger wage increases will support private consumption. Together with a modest revival of foreign demand, this should lead to a moderate economic recovery.
- The high level of interest rates will still curb investment and construction activity.
- State-support will be reduced further to keep the public deficit on a low level.
- The "traffic-light"-coalition (social democrats, liberals, environmentalist) will keep up its compromises and remain in office to avoid a new election with probably high electoral gains for the right-wing party.

- Strong industrial base (23% of GDP in 2022)
- Low structural unemployment; well-developed apprenticeship system
- Importance of family-owned exporting SMEs (Mittelstand)
- Consensus-orientated politics, institutional system promoting representativeness

- Declining working population from 2020 onwards, despite immigration
- Strong dependence on international energy imports (share of net imports in domestic consumption was 69% in 2022)
- Economy's heavy dependence on foreign trade, which is mainly focused on single countries and single sectors
- Lots of bureaucracy and insufficient investment (especially in internet accessibility)

2024 OUTLOOK

- Despite the moderation in inflation, private consumption and investment will continue to be held back by fiscal consolidation and high interest rates.
- Climatic hazards caused by El Niño are likely to weigh on cocoa production, a sector that is already under pressure.
- Despite delays to some oil projects, high gold and oil prices, coupled with weak domestic demand, will support the trade surplus.
- An agreement to restructure the country's external debt should allow IMF aid to continue.

- Significant mining (gold), agricultural (cocoa), oil and gas resources
- Diversified, self-sufficient energy mix
- Major development of mobile telephony and progress in digitisation
- Stable democracy, active civil society
- Attractive business environment, favourable to FDI

- Very high public debt
- High government deficit resulting from low revenues and poor public sector management
- Fragile banking sector: non-performing loans, exposure to public debt, high interest rates
- Dependence on commodities: gold and oil (67% of exports), cocoa (10%, 30% with other agricultural products, such as cashew nuts)
- Illegal mining and gold smuggling
- Security threats, including jihadist infiltration in the north

2024 OUTLOOK

- Despite the broader European slowdown, growth will remain resilient. Continuous flow of EU funds will sustain investment, and a competitive tourism sector will continue to perform
- Fiscal consolidation needs will force a quick compression of government consumption, constituting the main drag on growth
- The confident re-election of New Democracy in the June snap elections ensures the country will continue implementing growth-friendly structural reforms
- Though public debt is very high, it is mostly held by official creditors. This, combined with the large cash buffer held by the state (17% of GDP) strongly mitigate sovereign risk

2024 OUTLOOK

- Growth will be mitigated by unfavourable external conditions. While private consumption would benefit from lower inflation, a slowdown in North America would penalise expatriate remittances and exports.
- Arévalo's election as president is being contested by the opposition and the establishment. His centre-left policies, including the fight against corruption, could be constrained. With his Semilla party in the minority in Congress, he will have to forge alliances of convenience.
- The new administration wants to devote a substantial budget to education and the environment, and hopes to increase revenue by broadening the tax base.

2024 OUTLOOK

- In 2024, domestic demand will drive growth: household consumption, public investment in infrastructure and FDI in mining projects, such as the Simandou iron ore mine, which should be completed by the end of the year.
- Trade will also contribute positively to growth, thanks to mineral exports (bauxite, aluminium, gold) and a recovery in agriculture.
- Since the 2021 coup, the country has been led by a military junta, which is supposed to lead a transition to civilian rule. However, the general elections scheduled for early 2025 are likely to be postponed due to the government's authoritarian tendencies and the delay in implementing reforms.

2024 OUTLOOK

- Oil will support the exceptional pace of growth in 2024. The introduction of a new ship to the Payara field will enhance production capabilities. Auctioning off blocks will attract investors.
- Non-oil activities (construction, services) will be stimulated by the positive impacts of the oil sector. This trickle-down effect will boost domestic demand (increased wages and public spending) while maintaining inflationary pressures.
- Agricultural production (sugar cane, rice) may still suffer from El Niño and associated drought.
- The narrow legislative majority is expected to persist until the next elections in 2025.

GDP PER CAPITA US Dollars	1,702

2024 OUTLOOK

- Since the assassination of President Jovenel Moïse in July 2021, the country has been plunged into an economic, political and security crisis.
- The country is expected to return to growth in 2024. However, this rebound depends on an improvement in the political and security situation. To this end, in October 2023, the UN approved the deployment of an international military force to support the local police.
- Endemic insecurity and corruption will maintain a mediocre business climate. Private consumption will be restricted by the still high unemployment rate, the cholera epidemic and persistent inflation.

2024 OUTLOOK

- Modest GDP expansion anticipated in 2024, driven by private consumption and the services sector.
- Resilient labor market and rising tourism to bolster retail sales and services.
- Slow growth in advanced economies continues to hinder external demand.
- High interest rates pose a downside risk to private consumption due to a weak asset market implying a negative wealth effect, a shift from liquid accounts to higher yielding fixed deposit accounts, and the appreciation of the HKD encouraging spending outside Hong Kong.

2024 OUTLOOK

- The Hungarian economy will rebound from the recession with household consumption driving growth thanks to increasing real wages and less precautionary savings.
- Although inflation has been receding, it is expected to remain higher than the EU and regional averages.
- Foreign direct investment projects will boost investment while exports will contribute to growth, especially if the main trading partner, Western Europe, recovers.
- The lack of transfers from the EU budget results from the disputed rule-of-law issues making public sector investments limited.

- Diversified economy
- High quality infrastructure thanks to European funds
- Integrated within the European supply chain
- Trained workforce
- Low corporate taxation
- Generally positive payment behaviour

- Ageing population, low birth rate
- Open economy exposed to European economic trends
- Regional disparities; lack of mobility
- Deficiencies in vocational education
- Poor levels of innovation and R&D, high content of imported inputs in exports
- The EU rule-of-law dispute

2024 OUTLOOK

- Iceland's strong tourism industry is expected to be less affected by a slowdown in tourism as it is generally a "high end" destination.
- Domestic demand will slow down in 2024, affected by still high inflation and a weakening labour market.
- The high interest rate level will dampen business activity and is expected to remain high until inflation converges towards its target.
- The current government, which started its second term in 2021, is slowing down public investments and spending as it tries to ease inflationary pressures.

- Very high standard of living and low inequality in the society
- Strong tourism industry
- Abundant renewable energy (100% of the electricity consumption is produced by renewable energy)
- Not an EU-country, but highly integrated into the European Union via the Agreement on the European Economic Area and the Schengen Agreement, a NATO-member state

- Volcanic and seismic risks
- Small and very open economy: constrained monetary policy
- Concentration of production and exports (aluminum and marine products accounted for 73% of all goods exports in 2022)
- Volatile activity due to dependence on tourist inflows
- Wage growth higher than productivity growth

2024 OUTLOOK

- Moderation in manufacturing activity and exports amid a global slowdown means that domestic demand is the main growth anchor.
- Despite a focus on government capex, monsoon-related impact on agricultural output should fan food inflationary pressures. This will hit consumption and risk new food export restrictions.
- Private investment growth could also be affected ahead of the general elections in April-May 2024.
- Rising global energy prices will pressure current account balance, while rising policy rate and subsidy burdens will impose fiscal restraint.

2024 OUTLOOK

- Economic growth will remain stable, driven by robust private consumption and the recovery in tourism.
- The building of the new capital city and the development of metal processing, notably nickel, would drive investment.
- Bank Indonesia is likely to moderately cut its policy rate in 2024, as inflation remains within target range and depreciation pressure alleviates amid a monetary easing from the Fed.
- Prabowo Subianto is one of the favorites for the general elections to be held in February 2024. While not from the same party than Jokowi, his economic policies would remain broadly in line with the former president.

2024 OUTLOOK

- Higher oil prices will support growth in 2024, but the pace will remain subdued due to international sanctions and high inflation.
- Iran's current account surplus is expected to inch down as economic challenges in key export markets will weigh on non-oil exports.
- Budget deficit will widen as public sector wage will weigh despite efforts to cut expenditure.
- A return to the Iran Nuclear Deal seems challenging to achieve despite recent indirect talks between Iran and the US. Establishment of closer ties with Saudi Arabia may have positive contributions to regional trade.

	BUSINESS CLIMATE	E

POPULATION Millions of persons	42.2
GDP PER CAPITA US Dollars	6,181

2024 OUTLOOK

- The country will return to growth, if oil production increases, after being subject to OPEC+ restrictions in 2023.
- While public revenues would benefit from a more dynamic oil sector, the expansionary budget of 2023-25 will penalise the budget balance.
- The rise in oil exports would offset the rise in imports linked to the revaluation of the dinar, as well as increased public spending and foreign investment.
- While the election of a president, the appointment of a prime minister and the formation of a government in 2022 have reduced political uncertainty, problems, particularly security problems, persist.

- Vast oil and gas reserves, low extraction costs
- Interest from foreign investors in infrastructure, hydrocarbons and cement
- Young and growing population
- Strengthening relations with China, leading to new oil and construction agreements

- Oil-dependent economy
- Social, political and security instability fuelled by Iranian interference, religious and ethnic divisions, corruption, bureaucracy and poor infrastructure (especially electricity)
- Government bringing together Sunnis, Kurds and pro-Iranian Shiites, reluctant to speed up economic and institutional reforms
- Tensions between the central government and Kurdistan over the redistribution of oil revenues
- Large informal sector

	BUSINESS CLIMATE	A1

POPULATION Millions of persons	5.2
GDP PER CAPITA US Dollars	103,311

2024 OUTLOOK

- A fall in activity of multinational corporations is causing a slowdown with investments and exports falling but is expected to slowly recover in 2024.
- Domestic consumption is still buoyant and labour market is strong which, along with improving purchasing power, will help household spending in 2024.
- Ireland is still suffering from an undersupply of housing, which is causing some public discontent, but also supporting house prices, which will help the construction sector.
- Phasing out of the last government support measures are expected to cause a further rise in corporate insolvencies in 2024.

- Flexible labour and goods markets
- Favourable business environment, attractive taxation
- Presence of multinational companies, particularly from the United States, which account for 22% of employment and 63% of value added in the non-financial business sector
- Presence (through multinationals) in sectors with high value added, including pharmaceuticals, IT and medical equipment

- Dependent on the economic situation and tax regimes of the United States and Europe, particularly the United Kingdom
- Vulnerable to changes in the strategies of foreign companies
- Private corporate debt levels still high
- Banking sector still vulnerable to shocks

2024 OUTLOOK

- Assuming the war between Hamas and Israel remains contained in Gaza, the economy will modestly grow in 2024. Relatively high living costs, poor growth in main export markets, increased political and security risks, will weigh on domestic demand.
- The goods balance will remain in deficit, compounded by weak external demand. Tourism flows will be negatively affected by the war.
- Increased social spending to support growth and households most affected by the war will result in a wider fiscal deficit in 2024.
- Gaza war and controversial judicial reform will raise political and security risks.

2024 OUTLOOK

- The economy will struggle to break away from near-stagnant growth rates, suffering from still-subdued export demand from European partners
- Depleting household savings and a resilient labor market will outweigh each other, resulting in stable consumption
- Private investment will continue to lose steam, but European funds will continue to support public investment
- ECB/EU support will mitigate risks arising from higher debt, as long as the government and the EU remain in good terms
- The right-wing coalition led by Giorgia Meloni has consolidated enough support to form a durable government, improving political stability

2024 OUTLOOK

- Growth will remain subdued as the Israel-Hamas war will weigh on private consumption, investments, and tourism flows.
- An estimated increase in fertilizer prices will raise Jordan's export revenues but the goods trade balance will remain in deficit due to strong domestic demand for imported fuels, food and gold.
- Fiscal consolidation is expected to continue in line with the IMF program's targets.
- The geographic proximity to the Israel-Hamas war and the domestic pro-Palestinian stance may exert pressure on the authorities to balance ties with Israel.

- Political and financial support from Gulf monarchies and Western countries
- Major producer of phosphate and potash
- Expatriate workforce and tourism are important sources of foreign currency

- Shortage of natural energy, food, and water resources and weak manufacturing base
- Vulnerability to international economic conditions and geopolitical instability in the Middle East
- Public and external accounts imbalances resulting in dependence on foreign aid and capital

2024 OUTLOOK

- Economic growth will slow in 2024, but will remain dynamic, driven by household consumption and investment.
- The slowdown in inflation will support household consumption.
- The current account balance will deteriorate: oil exports (subject to the risk of disruption in the event of sanctions) will be offset by an increase in imports. Negative primary income will contribute to maintaining this deficit. This result is due to the presence of foreign companies, particularly in the energy sector.
- The budget balance will deteriorate as a result of increased spending.

- Significant oil, gas and mining potential
- The State enjoys a net creditor position and has a well-endowed sovereign wealth fund thanks to hydrocarbon production
- Abundant FDI
- Floating exchange rate
- Member of the Eurasian Economic Union (EAEU) and China's Belt and Road Initiative (BRI)
- Strategically located between Europe, Russia and China

- Highly dependent on Russia, China and commodities (oil, gas, uranium, iron, steel, copper)
- Weakly competitive market structures and significant non-tariff barriers despite WTO membership
- Banking system still fragile and significant dollarization
- Weak governance

2024 OUTLOOK

- Business activity will grow slightly faster thanks to the agricultural recovery (return of rains with el Niño), which will moderate prices. Monetary and fiscal tightening will dampen demand for credit, despite renewed confidence following the peaceful transfer of power.
- Commitments made with the IMF will support fiscal consolidation. External public debt will present risks, with servicing of the debt by 2024 likely to be problematic but should be covered by IMF support.
- The boom in regional trade and the firmness of expatriate remittances will offset the higher cost of imports due to the depreciation of the shilling, stabilizing the current account balance.

2024 OUTLOOK

- Growth will recover in 2024 due to a rise of crude oil and refined fuel exports to the additional refining capacity offered by the Al-Zour refinery.
- An estimated rise of around 3% in oil production and gradually higher oil prices will support fiscal revenues. The failure to pass a new debt law will continue to weigh on the government's ability to tap international capital. Persisting disagreements between the parliament and the executive could delay the approval of the law. Higher oil revenues will contribute to the current account surplus.
- Tensions between the cabinet and the parliament will persist.

2024 OUTLOOK

- Growth will stabilise in 2024. It will be driven by household consumption and investment.
- Inflation will slow, but remain high, hampering household consumption. It will also be affected by lower transfers from Russia.
- The current account balance will improve, with higher exports of services and non-gold products and lower energy prices, but will remain in deficit. The decline in remittances from Russia will have a negative impact.
- The budget deficit will widen, following a reduction in revenues associated with gold revenues and a moderation in imports.

2024 OUTLOOK

- In 2024, growth is expected to stay sustained, driven by tourism, foreign investment, and exports.
- Lao kip depreciation keeps imported prices high, and inflation elevated. Although easing, still-high inflation will continue to weigh on consumption.
- Current account deficit to widen as tourism receipts, remittances, and exports unable to offset higher imports and debt-related interest payments.
- Over half of the debt is owed to China due to major Chinese-funded infrastructure projects, which raises concerns about the country's sovereignty.

2024 OUTLOOK

- The fallout from the conflict in Ukraine will continue to be felt, despite a moderate upturn in neighborhood demand for IT and electronics, and lower inflation, boosting private consumption. The wood sector is suffering with the European construction.
- The EU Recovery Fund will continue to encourage investment in infrastructure and energy.
- The removal of support measures related to the cost of energy and the flow of Ukrainian refugees will exceed defense and health spending.
- The ruling coalition, shaken by differences that led to the resignation of the Prime Minister, has been reconstituted by the new head of government, Evika Silina.

2024 OUTLOOK

- The Lebanese economy will remain under severe stress despite a modest recovery in 2024, owing to favourable base effects. But the war between Hamas and Israel will have depressive impacts mainly through a decline in tourism revenues and inflow of expatriates' remittances.
- The current account deficit is expected to narrow in 2024 due to a decrease in domestic demand.
- The fiscal performance will remain weak due to low growth and lack of implementation of fiscal reforms.
- The fragmented parliament, a caretaking government since the 2022 elections, and the absence of a president will continue to present a significant strain against the reform process.

- Strategic geopolitical location, at the crossroads of three continents
- Possibility to attract international aid in case of a commitment by the government on reforms
- Offshore gas potential
- Tourism potential

- March 2020 sovereign default makes access to external funding problematic, forcing the consumption of dwindling foreign exchange reserves
- Commercial banks remain insolvent due to sovereign default
- Lack of a diversified manufacturing base leading to import dependence
- Persistent political quagmire, with confessional and sectarian divisions paralysing the political scene and hindering reforms
- Armed Iran-controlled Shiite Hezbollah contributes to political stalemate and tensions with Israel

2024 OUTLOOK

- The second phase of the Lesotho Highlands Water Project and the resulting investments will support growth.
- The public deficit will improve because of higher revenues from the Southern African Customs Union.
- The current account deficit will be widened by high bills and rising imports, combined with a fall in diamond exports.
- By reorganizing his cabinet and allying himself with the Basotho Action Party, Prime Minister S. Matekane has overcome the motion of censure against his coalition government. Political instability will persist in the absence of a two-thirds majority for the coalition government.

- Sound public and external accounts
- Banking system dominated by three Scandinavian institutions
- Diversification of energy supply (Klaipeda gas terminal, shale gas potential, electricity links with Poland and Sweden)
- Member of the EU, the Eurozone and NATO

- Tight labour market: shrinking workforce (emigration of skilled young people) and high structural unemployment
- Large informal economy (22% of GDP)
- High income disparity between the capital and the regions, particularly in the northeast, where poverty persists
- Limited value added of exports (mineral products, agri-food, electrical equipment)

2023 OUTLOOK

- The ECB's restrictive monetary policy led to a noticeable decrease in investments and financial activity. As the central bank should keep its interest rates stable or even decrease them in the second half of 2024, activity should show a moderate recovery.
- Thanks to the indexation of wages, the purchasing power should remain stable, which will foster private consumption.
- In the last general election in October 2023, the coalition of Liberals, Greens and Social Democrats lost its majority. The election winners were the Christian Democrats who formed a new government together with the Liberals.

2024 OUTLOOK

- In 2024, the mining sector will boost economic growth thanks to the implementation of its revised code and increased investment, both domestic and foreign.
- Mining exports will increase, along with vanilla (lift of the minimum export price) and textiles.
- Structural reforms, supported by an IMF program until July 2024, and mining revenues will reduce fiscal risk. The deficit will be financed mainly by concessional loans.
- In November and December 2023, the two rounds of presidential elections will have taken place in a tense social and political climate, with a possible risk of a coup.

2024 OUTLOOK

- In 2024, growth will be sustained by a recovery in agriculture, particularly through higher tobacco production and exports.
- The depreciation of the Malawian kwacha, and the shortage of some imported goods due to the lack of foreign currency, will continue to drive up the already high prices of energy and food on the domestic market.
- Foreign exchange reserves should increase thanks to the signing of an agreement with the IMF on a USD 174 million, 48-month Extended Credit Facility (ECF), and the conclusion of debt restructuring agreements, the repayment of which is estimated at 24% of the government budget for 2023/24.

- Natural resources (tobacco, tea, coffee, sugar, soyabeans, uranium, niobium)
- Growing service sector
- Active civil society
- Relative institutional stability

- Economy dominated by subsistence agriculture, vulnerable to climatic hazards and input prices
- Food insecurity, extreme poverty (in 2020, 70% of the population lived on less than USD 2.15 a day)
- Lack of infrastructures (water, energy, transport, education, health) and geographical isolation
- Widespread corruption
- Heavy public debt fuelled by a high deficit
- Extremely weakness of foreign exchange reserves fuelled by a massive deficit in trade in goods (fertilisers, fuel, medicines) and services, despite remittances from expatriates and international aid

2024 OUTLOOK

- The economy will continue to be mostly driven by domestic demand, which benefits from policy measures such as financial aid for low- and middle-income households and the introduction of a progressive wage scheme.
- However, Bank Negara Malaysia may maintain interest rates throughout 2024 as the introduction of target subsidies scheme would result in higher inflation.
- After a decline in 2023, better export prospects are expected, particularly in the technology sector.
- Prime Minister Anwar has faced a fall in popularity, weakening his presidency at the head of a fragmented government.

- Diversified exports
- Large domestic demand mitigates external headwinds
- Dynamic services sector
- Investment supported by the expansion of the local financial market and access to FDIs
- Exchange rate flexibility
- High per capita income
- Air travel hub

- Budget income dependent on performances in the oil and gas sector
- Very high household debt levels
- Low fiscal revenues
- Erosion of price competitiveness due to increasing labour costs
- Political uncertainties and instability
- Persistent regional disparities
- Ethnic and religious disputes

2024 OUTLOOK

- Strong economic growth is expected in 2024, mainly driven by tourism.
- The current account is expected to stay under pressure from capital imports necessary for infrastructure investments.
- The fiscal deficit is expected to narrow thanks to revenue from a stronger tourism sector.
- External financing and liquidity stress are high as external debt servicing is rising, global financial conditions are tight and FX reserves are low.
- President Mohamed Muizzu was elected on the promise of withdrawing Indian soldiers from the Maldives, which could deteriorate relations with New Delhi.

2024 OUTLOOK

- Growth will be driven by cotton production and the mining sector, thanks to high gold prices and the opening of the Goulamina lithium mine.
- Security and political risks will limit non-mining investments and other external financing.
- Security problems will remain alarming, as fighting between the government and the northern Tuaregs resumed in September 2023 and UN troops withdrew at the end of the year.
- The ruling junta was strengthened by the constitutional referendum of June 2023. It pledged to restore power to civilians, but announced the postponement of the presidential election, initially scheduled for February 2024.

2024 OUTLOOK

- Amid buoyant tourism and a strong labor market, Malta will continue to be among the EU's most dynamic economies
- Thanks to the low public debt, generous energy subsidies were deployed to protect purchasing power, and thus household consumption
- Malta faces significant scrutiny from the EU and other international authorities on corruption and money laundering. This constitutes a risk to the country's financial sector, foreign investment flows, and the stability of the incumbent government (Labor Party, led by PM Robert Abela)
- The golden passport scheme is being phased out, creating structural downward pressure on revenue

2024 OUTLOOK

- Growth will be based on the extractive sector: increased mining production, start of gas exports thanks to the Grand Tortue Ahmeyim offshore field in cooperation with Senegal, and foreign investments in the country's natural reserves.
- Lower fuel subsidies and higher gas and mining revenues will gently reduce the budget deficit. Structural reforms will be supported by two IMF programs: an Extended Credit Facility and a Resilience and Sustainability Facility.
- The presidential election will be held in June 2024, while the 2023 legislative elections were won by the ruling party.

2024 OUTLOOK

- Growth will stabilise, driven mainly by an albeit more measured recovery in tourism, a strengthening in construction, and expansion in the financial sector.
- The current account deficit is expected to shrink thanks to tourism, with free trade and double taxation agreements with India and China supporting transshipment and financial services benefiting from the removal from the lists of «tax havens».
- Fiscal consolidation will be slower than expected. In the run-up to the elections, and due to the increase in social benefits and subsidies (oil, food), the public deficit will widen slightly.

2024 OUTLOOK

- GDP growth will lose steam in 2024, dragged down by weaker U.S. activity affecting manufacturing and consumption (via lower remittances from expatriates) as well as still tight credit conditions.
- Conversely, public expenditure is likely to accelerate as the government aggressively loosens fiscal policy, with higher social spending ahead of the general elections.
- General elections will be held in June 2024. Leftist Claudia Sheinbaum is the most likely to become the next president, benefiting from incumbent President Lopez Obrador's popularity.

2024 OUTLOOK

- After modest growth in 2023, the economy should recover in 2024. The slowdown in inflation and the reduction in key interest rates by the National Bank of Moldova will support household consumption (the main contributor to growth).
- The current account balance, still very negative, will be financed by the IMF and the EU.
- An expected increase in revenues should slightly reduce the budget deficit. External public debt (mainly with international organisations) will increase, in order to support the 2024 budget, but also to finance projects, notably in the transport and energy sectors.

2024 OUTLOOK

- Strong economic growth is expected in 2024, driven by exports and private consumption.
- Exports will be supported by the Chinese demand for its mining sector products.
- Inflation will decrease moderately thanks to lower global commodity prices and still tight monetary policy.
- Fiscal expansion will support consumption but will tip the budget balance into deficit given the lower revenues from the mining sector.
- The current account deficit will widen as the resumption in demand will push up imports, and mining exports will stabilize after their strong performance in 2023.

- Development of colossal mining resources (coal, copper, gold)
- Strategic geographical position between China and Europe/Russia
- Potential for diversification of production, including agribusiness, and tourism
- Important donor support (4.8% of GDP in 2019)

- Small economy vulnerable to changes in commodity prices and Chinese demand
- Landlocked country
- Internal political dissensions
- Massive land degradation, 90% of the vast grasslands prone to desertification
- Alarming level of corruption and fragile governance
- Limited economic diversification and heavy reliance on mining sector
- Infrastructure gaps

2024 OUTLOOK

- The economy will be exposed to the weakness of that of its European partners. However, tourism will remain dynamic and continue to grow, after arrivals exceeded their pre-pandemic level in 2023.
- Despite fiscal consolidation efforts, high debt servicing (7.4% of GDP) will weigh on public accounts.
- The April 2023 presidential election was won by J. Milatović of the Europe Now! party. The party also won the parliamentary elections in June 2023, forming a pro-Serbian and pro-Russian alliance. While the coalition is diverse, the government retains a pro-European majority, with the aim of rapid EU accession.

- Booming tourism sector
- Application to join the European Union supported by economic reforms (Europe Now programme)
- Use of the euro to avoid exchange rate crises

- Small, undiversified economy, with a weak export base and dependence on tourism
- Structural current account deficit weighed down by a large trade deficit, which has generated a high level of external debt
- Corruption, informal economy, emigration and unemployment
- Use of the euro can lead to asymmetric shocks, with no credible early prospect of participating in European economic and monetary governance

2024 OUTLOOK

- The economic impact of the September 2023 earthquake will remain limited: tourism, which will have exceeded its pre-pandemic level, and reconstruction will drive growth. It will also benefit from the booming of the manufacturing and phosphate sectors.
- Consumption will be boosted by remittances from the Diaspora and tourism, but limited by inflation. Public investment in renewable energies and agriculture will increase.
- The reconstruction plan, budgeted at USD 12 billion (1.8% of GDP) over five years, is financed by domestic funds and international aid. Health spending will also weigh on the deficit, despite IMF-led fiscal consolidation.

- Strategic position on the Strait of Gibraltar and proximity to the European market
- Institutional stability: attachment to King Mohammed VI, active civil society
- Strong relations with Europe, the United States, and international donors
- Substantial inward investment from Europe and outward investment to West Africa
- Upmarket strategy and industrial diversification

- Poverty, youth unemployment, social and regional disparities, Islamist-liberal opposition
- Economy dependent on agriculture (12% of GDP and 30% of population), and therefore on climate and water availability
- Commercial dependence on the European Union, particularly in tourism and industry
- Low productivity
- Competition from other Mediterranean countries, such as Türkiye and Egypt
- Dispute over former Spanish Sahara

2024 OUTLOOK

- Growth will decelerate, supported by increased offshore LNG production and the resumption of the Total Energies LNG project.
- Increased imports of LNG-related goods will widen the current account deficit.
- Reforms agreed with the IMF, including wage cuts, mining taxation and the resumption of European aid, will reduce the public deficit. Debt servicing and defense spending will continue to weigh heavily.
- Frelimo will retain its political grip until the October 2024 elections, led by President F. Nyusi, who could stand for re-election thanks to a constitutional amendment and an improved security situation in the north.

2024 OUTLOOK

- Slim prospects for civil war resolution by 2024, signaling a sluggish economy ahead.
- Western sanctions impact the economy, posing additional barriers to recovery.
- Persistent inflationary pressures from production disruptions, increased business costs (minimum wage hike), and currency depreciation leading to higher import prices.
- Persistent current account deficit due to trade restrictions and global economic weakness
- Myanmar's neighboring countries exploit opportunities arising from Western companies withdrawing post the military coup.

2024 OUTLOOK

- In 2024, growth will continue to be sustained by diamond, gold and uranium mining and exports, driven by global demand and high prices.
- However, the growth outlook will be dampened by the sluggishness of South Africa and Europe, which will have a negative impact on tourism, and by the uncertainties surrounding agriculture, which is suffering from drought.
- The current account deficit will remain high, but will be largely financed by foreign investment, notably in oil and gas exploration.
- Despite the persistence of significant inequalities, partly linked to the ownership of agricultural land, SWAPO remains dominant in the run-up to the November 2024 elections.

- Significant mineral (diamonds, gold, uranium, copper) and fishery resources
- Good transport infrastructure and long coastline
- A well-developed local financial market
- Stable democracy since 1990
- Tourism potential
- Discovery of offshore hydrocarbon deposits
- Prospects for green hydrogen production
- Namibian dollar pegged to the rand

- Dependence on the mining sector and on South Africa
- Large trade deficit linked to imports of capital goods and fuels
- Corruption
- High unemployment, persistent inequalities, tensions over land ownership
- Agricultural sector exposed to climatic hazards
- High public debt limits fiscal space

2024 OUTLOOK

- After a marked slowdown, growth is set to accelerate amid large remittances and the recovery in tourism.
- Nevertheless, the economic rebound will be fragile as oil prices will remain elevated while global food prices may rise due to El Nino and protectionism measures.
- The current account will remain in deficit, but this will not be a major risk, given the size of the country's foreign exchange reserves.
- After PM Dohal won a confidence vote in March 2023, political uncertainty remains due to tensions between and within coalition parties.

- Reliable remittance flows support consumption, the main driver of growth
- Tourism potential
- Financial and technical support from India and China
- Recipient of vast sums of regional and international aid
- Huge potential capacity in hydroelectricity

- Landlocked, poor accessibility
- Lack of infrastructure (education, transport, water), shortage of electricity and fuel, non-diversified export basket
- Large trade deficit due to the limited production of consumer and investment goods
- High dependence on the Indian economy through exports as well as a currency peg
- Exodus of active population
- Political instability
- Notable private sector indebtedness

2024 OUTLOOK

- After the modest recession in 2023, wage adaptations should foster private consumption again. Together with a slow comeback of foreign trade this should result in a moderate recovery the Dutch economy.
- Together with the landslide election victory of the far-right PVV-party, the coalition negotiations begin. Several combinations are possible, like a coalition together with the Conservatives (VVD) and a new Christian-democratic party (NSC) as well as a Grand-Coalition without the participation of the PVV. Overall, it is clear that finding a stable coalition will be difficult and time-consuming.

2024 OUTLOOK

- Growth should rebound if the international economic sanctions, including an ECOWAS embargo, imposed following the coup, are lifted in early 2024.
- It would then be underpinned by the rise in oil production and exports, linked to the inauguration at the end of 2023 of an oil pipeline linking the country to Benin, and by the restart of uranium production.
- However, activity could be hampered by a drop in agricultural performance due to the risk of El Niño-induced drought.
- The jihadist threat will remain significant, even if the country is trying to deal with it by creating the New Sahel Alliance with Mali and Burkina Faso.

- World's 7th largest producer of uranium (2021)
- Net exporter of gold and petroleum products
- Investment efforts in agriculture and infrastructure

- Vulnerability to climate shocks and fluctuations in commodity prices
- Dependence on subsistence agriculture and energy imports from Nigeria (70% of electricity supply)
- Suspension from WAEMU and ECOWAS following the coup in July 2023
- Landlocked
- Rapidly growing population, severe poverty (3rd lowest HDI in the world), chronic food crisis
- Defective system for collecting taxes and customs duties
- Endemic corruption and importance of the informal sector
- Terrorist attacks, particularly in the south-east

2024 OUTLOOK

- In June 2023, to reduce pressure on foreign exchange reserves, unify exchange rates and relieve public finances, the new president let the official exchange rate plunge and removed the fuel subsidy, triggering an inflationary escalation. Faced with discontent, he was forced to backtrack in part.
- This could be reversed by the end of 2024, when the Dangote mega-refinery is fully operational, reducing imports and generating additional foreign currency. An increase in multilateral aid should help to turn the corner.
- Growth will be driven by the oil sector, which will benefit from high prices and increased production.

- First African economy and population
- Significant hydrocarbon resources
- Large agricultural potential (5th world producer of cocoa) and mining (gold, barite, tin, zinc)
- Rapid development of fintech and film industry
- Low external public debt relative to GDP

- Dependence on oil (90% of exports, 50% of tax revenue)
- Oil production subject to theft and sabotage
- Inadequate oil refining and gas transportation
- Debt interests exceeding tax revenue
- Low foreign exchange reserves
- Widespread insecurity and terrorist threat in the North
- Reduced manufacturing activity (9% of GDP)
- Deficient electricity and transport infrastructure weighing on agriculture
- Unemployment, poverty, food insecurity, corruption

2024 OUTLOOK

- Modest growth is set to increase. Private consumption will bounce back with a marked reduction in inflation and an increase in real wages. Public investment, particularly in construction (freeway to Albania, railways, gas pipeline), will be sustained. The contribution of trade will remain negative, due to weak European demand and sustained imports.
- EU accession negotiations are boosting budgetary and governance reforms. A rise in public revenues is expected (lower tax exemptions), reducing the public deficit.
- The relationship with Bulgaria and minorities will influence the 2024 parliamentary elections.

- Association and Stabilisation Agreement with the EU, opening of accession negotiations in 2022
- Integration into the European manufacturing chain
- Wage competitiveness
- Support from European donors
- Transfers from expatriate workers (16% of GDP)
- Anchoring the denar to the euro

- Informal economy
- Sustained emigration of young people to the EU, with unemployment at 26%.
- Dependence on imported inputs and energy
- High degree of euroisation
- Inadequate infrastructures
- Polarized and unstable political landscape
- Insufficient progress in fighting corruption, organized crime and improving the rule of law

2024 OUTLOOK

- Global slowdown is affecting the Norwegian economy with falling exports, not only hydrocarbon activity. Business activity and investments are slowing down, affected by the high interest rates. Hydrocarbon investments are however rising.
- High rates are lowering household consumption and housing investments. The housing market already has a large number of houses for sale, which is expected to feed into lower prices in 2024.
- The currency continues to be weak, especially compared to the dollar. This will be a key factor when Norges Bank decides to cut interest rates as a weaker rate differential could weaken the currency further.

- Huge oil and natural gas deposits, the energy sector accounts for 36% of GDP, 16% of investments and 64% of exports
- High standard of living
- Largest sovereign wealth fund in the world (around 341% of mainland GDP in 2022, the fund owns almost 1.5% of all shares in the world)
- Norway has a preferential access to the EU market and is a NATO- member state

- Structural budget deficit when excluding oil and gas revenues
- High private household debt
- Significant labour costs and shortage of skilled workers
- Exposure to climate risk (such as significant drought in 2022, which put at risk the hydroelectric power stations' operations, particularly in the south)

2024 OUTLOOK

- Growth will edge up in 2024 on the back of elevated hydrocarbon revenues and mostly public investments in line with Vision 2040 program. Private consumption will benefit from tourism recovery.
- In line with expected higher energy prices and increase of around 3% of gas production, exports' growth will support the current account surplus. Coupled with the introduction of the income tax, this will support fiscal revenues as well.
- The regional instability presents for the country both an opportunity to mediate, and a source of risk, particularly with the war in Yemen which stands at Oman's west border.

2024 OUTLOOK

- Growth to recover modestly in 2024, helped by a rise in agricultural production. Nevertheless, significant macroeconomic stability risks persist.
- Inflation to remain sharp, which will see policy interest rates kept at high levels.
- Reforms under the IMF programme will make it challenging for the government to keep inflation in check and prevent further currency depreciation.
- Smooth implementation of the economic adjustment programme and easing import controls to boost investment growth.
- Political instability to remain, with the delayed general election to be held in January 2024.

2024 OUTLOOK

- Growth will slow in the wake of the crisis in mining activity, following the closure of the Cobre mine. While the logistics sector could benefit from the pick-up in world trade, the arid weather could further affect canal traffic.
- Business activity will be underpinned by investment in infrastructure and growth in consumption, buoyed by moderate inflation.
- The end of 2023 was marked by more than a month of disruption and even paralysis for the local economy, as a result of blockades and strikes linked to the cancelled mining contract. The elections in May 2024 will take place in a still fragile political and social climate.

2024 OUTLOOK

- Economic growth should accelerate in 2024 thanks to the recovery of the mining sector with the reopening of the Porgera gold mine, which has been out of production for three years. In addition, sustained growth in services (driven by tourist arrivals) and in agriculture will support the economy.
- Inflationary pressures, FX shortages, and external shocks represent downside risks for the country.
- The fiscal deficit is projected to narrow, reaching pre-pandemic levels, on expected fiscal consolidation.
- The FDI announcement for the Papua LNG project led by TotalEnergies is scheduled for 2024, with production starting in early 2028.

2024 OUTLOOK

- Growth will decelerate in 2024 as export activity slows down following its exceptional rebound in 2023. Export prospects to China will be clouded by strengthened ties with Taiwan.
- Private investment and consumption are expected to bounce back with moderated inflation and monetary easing, despite a reduction in public spending.
- Climate risk (El Niño) will remain high in 2024, as it has the potential to impact agricultural production (flooding).
- If Paraguay successfully asserts its claims, the renegotiation of the Itaipu Treaty (hydroelectric plant shared with Brazil) will increase derived income.

2024 OUTLOOK

- We expect a moderate resurgence in economic growth for 2024, supported by mineral exports. The El Niño phenomenon could slow down agricultural and fishery activities.
- Private investment and consumption will recover slightly, aided by reduced social risk, controlled inflation, and eased credit conditions. The «Con Puche Perú» plan and public-private partnerships (PPPs) will contribute to this recovery.
- Mining site expansion projects (Quellaveco, Toromochi) will strengthen the export sector.
- Political instability is anticipated to persist in 2024, fueled by ongoing disputes between Congress and the presidency, which could potentially lead to the ousting of President Boluarte.

2024 OUTLOOK

- Poland's economy will gradually recover and is expected to accelerate in H2 2024.
- Household consumption brings an increasing contribution to economic activity thanks to a tight labour market, growing wages and lower inflation, while the external situation remains the biggest risk.
- Monetary easing started relatively early (September 2023), which could increase inflation in the course of 2024.
- Despite the right-wing party Law and Justice (PiS) getting the most votes in the latest parliamentary elections, the coalition of opposition parties was able to form a government that is more EU-oriented.

2024 OUTLOOK

- Activity will slow markedly in 2024, due to a smaller contribution from tourism after an exceptional recovery in 2023.
- Domestic activity will also be impacted by the still restrictive monetary policy. 83% of business loans are at mixed or variable rates. Business insolvencies are therefore likely to rise again in 2024.
- The parliamentary elections in March 2024 look uncertain: at the end of 2023, the polls had the Socialist Party and the PSD (centre-right) neck and neck. A coalition will probably be needed to govern. This could include Chega (far right), which is in third place and rising sharply.

2024 OUTLOOK

- After the World Cup in 2023, Qatar's growth will inch up in 2024 helped by several international activities that will support international tourist arrivals and tourism-related sectors.
- In 2024, the budget surplus is expected to slightly inch down as elevated capital spending will partly offset higher hydrocarbon revenues.
- Higher energy prices will support export but a stronger increase in imports' bill mainly linked to capital good will drag down trade surplus.
- Political stability is expected to continue. Qatar's role as an international mediator will become more pronounced under current regional conflicts.

2024 OUTLOOK

- Growth will improve modestly in 2024, but will maintain a solid rate.
- Economic activity will be supported by resilient household and public consumption, investments thanks to efficient use of EU funds, and growing disposable income.
- While the adopted fiscal package improves the tax policy and will (slightly) lower the budget deficit, it could also result in higher inflation, increased unemployment and less vivid economic growth.
- The risk of political instability is exacerbated by four rounds of elections planned for 2024: the EU, local, presidential and parliamentary ones.

2024 OUTLOOK

- The economy is expected to continue recovering but with milder growth this year.
- The improvement is attributed to strengthening domestic demand supported by growing consumption and a tight labour market with higher wages, as well as increasing military spending boosting industrial production and construction.
- The monetary tightening will be continued if the rouble depreciates further amid low oil prices and increasing imports.
- The next presidential election will be held in March 2024, however, that will be only a formality and Vladimir Putin is expected to secure another term until 2030.

2024 OUTLOOK

- Growth will be strong, driven by investment in manufacturing and infrastructure (post-flood reconstruction in 2023), a recovery in tourism and strong demand for export products.
- President Kagame is expected to win the legislative and presidential elections in August 2024. The prospect of this will keep up household and business subsidies, against a backdrop of high inflation fueled by the depreciation of the franc.
- Aid and security spending will exacerbate the public deficit, while the heavy current account deficit will persist due to structural dependence on imports of raw materials and capital goods, despite good export performance.

- Mineral resources (gold, cement constituents) and agricultural resources (tea, coffee, dairy products)
- Growth of business tourism and development of leisure tourism
- Developing industrial and financial base
- One of the most favorable business environments on the African continent
- Significant progress in governance and relative political stability

- Agriculture exposed to climatic risks
- Large twin deficits and high public debt
- Highly dependent on imported energy prices and international aid
- Landlocked and exposed to geopolitical tensions in the Great Lakes region
- Mineral smuggling, especially from the DRC
- High demographic pressure, population density among the highest in Africa

SAUDI ARABIA

COFACE ASSESSMENTS	COUNTRY RISK	A4
	BUSINESS CLIMATE	B

POPULATION Millions of persons	32.2
GDP PER CAPITA US Dollars	34,441

2024 OUTLOOK

- Saudi growth will increase in 2024, mainly driven by investment and private consumption.
- Budget will remain in deficit in 2024 following the decline in oil production the year before.
- Slow export growth, due to the cuts in oil production compared with faster import demand linked to diversification efforts will continue to weigh on the current account surplus.
- Although Saudi Arabia's foreign policy is innovating, its strategic relation with the US is expected to remain solid. Rising economic competition between the United Arab Emirates and Saudi Arabia to attract more foreign investments increase the risk of cracks in OPEC.

- Offshore hydrocarbon deposits to come on stream in the second half of 2024 at the earliest
- CFA franc pegged to the euro
- IMF-supported pro-business reforms and infrastructure investments (Plan Sénégal Emergent)
- Membership of the West African Monetary Union (UEMOA), providing relative monetary stability and a low exchange rate
- Solid track record of political stability

- Vulnerable to climatic hazards and fluctuations in commodity prices (peanuts, cotton, fish, gold, etc.)
- Food importer (~30% net self-sufficiency), despite agriculture providing 16% of GDP and employing 30% of the working population
- Ineffective state intervention, leading to bureaucracy and high indebtedness
- Large current account deficit

SERBIA

COFACE ASSESSMENTS	COUNTRY RISK	C
	BUSINESS CLIMATE	A4
POPULATION Millions of persons		
6.7		
GDP PER CAPITA US Dollars		
9,528		

2024 OUTLOOK

- After suffering the impact of the war in Ukraine and the fall in European demand, growth should accelerate. Lower inflation will encourage consumption and investment.
- A two-year, €2.4 billion lending facility with the IMF was agreed at the end of 2022, along with fiscal consolidation, enabling a gradual reduction in the public debt and deficit.
- The early parliamentary elections at the end of 2023 consolidated the position of President Vučić's Serbian Progressive Party. Contested by the opposition and subject to allegations of fraud, the poll plunged the country into a political crisis, fuelled by popular anger.

- Stabilisation and Association Agreement with the EU allowing 93% of Serbian products to enter duty-free
- Public sector reform in coordination with the IMF
- Potential for exploiting natural resources (coal, copper, zinc, lead, bauxite, gold, silver, lithium) significant production of cereals, fruit and vegetables
- booming automotive industry

- Energy dependence on Russia
- Progress on EU accession still limited by EU concerns over rule of law, status of Kosovo and links with Russia
- Lengthy judicial procedures, customs harassment, corruption, lack of government transparency
- Large informal sector

2024 OUTLOOK

- In 2024, growth will continue to be underpinned by the agricultural and mining export sectors.
- The depreciation of the leone and higher rice imports from Asian countries, whose harvests are likely to be reduced by the El Niño phenomenon, will help to keep inflation high and weigh on consumption, while food insecurity affects ¾ of the population.
- Social and political tensions will persist in 2024, following an attempted coup in which former president Koroma (2007-2028) took part at the end of November 2023.

- Significant mining resources: iron ore, titanium, aluminium diamonds, tantalite, rutile and gold
- Timber, coffee, rice, cocoa and palm oil production
- Financial support from international institutions
- Tourism potential
- Significant port activity that is set to expand
- Participation in AGOA

- Vulnerability to the weather conditions
- Highly dependent on commodity prices, both imported and exported
- Low public revenue (15% of GDP)
- Corruption, inadequate protection of property rights
- Hard for small and medium-sized enterprises to access credit
- Inadequate infrastructure, failing health system
- Extreme poverty, high unemployment

2024 OUTLOOK

- Economy to see faster growth in 2024 but remain below trend. This mainly reflects the effect of sluggish global demand, weighing on transport services and manufacturing activity.
- The latter would, however, received some relief from the expected recovery in demand for electronics.
- Private consumption to remain robust amid fiscal supports toward lower-income households, low unemployment.
- Although slowing, inflation will stay higher than pre-pandemic times due to elevated and volatile commodity prices and GST rate hike.

2024 OUTLOOK

- The moderate upturn in foreign demand will boost exports, particularly in the automotive sector. Private consumption will also increase, thanks to rising real wages and falling, albeit still high, inflation. Investment will continue to be supported by EU funds.
- The permanent budgetary measures of 2023, such as the reduction of the VAT rate in catering and sports, will limit the fall in the public deficit caused by the removal of energy subsidies.
- The new populist and pro-Russian Prime Minister, Robert Fico, will lead a coalition that also includes the nationalist far right, as well as the centre-left. The presidential election will be held in spring 2024.

2024 OUTLOOK

- Growth is expected to accelerate in 2024. However, the worst in decades floods that hit Slovenia in August 2023 will require years of reconstruction.
- If weak foreign demand continues, it will limit Slovenia's economic activity as it is highly open to foreign trade and included in supply chains.
- Household consumption is expected to recover thanks to increasing employment, solid wage growth and progressing disinflation.
- The reconstruction after the 2023 flooding enhances government spending above planned levels both in 2023 and 2024, while some EU transfers will be redirected to support the recovery.

2024 OUTLOOK

- The economy will recover thanks to reforms in the energy sector, which will support investment and the supply of electricity. Consumption will rebound on the back of disinflation.
- Exports under pressure, due to lower prices and transport issues, will weigh on the external accounts.
- Public accounts will continue to deteriorate. Revenues will be constrained by the economic climate, while spending pressures will intensify (wages, bailouts of public companies, debt servicing), especially in an election year.
- The ANC may not reach an absolute majority in the 2024 elections, which would be the first time in its history.

2024 OUTLOOK

- The global recovery in electronics and info-comm technology products will be supportive for Korean exports (36% of GDP), bolstering GDP growth.
- Private consumption growth may be held back by weakened spending power and higher debt servicing rates.
- Further growth recovery could also be constrained by higher interest rates, housing downturn, elevated household debt levels.
- Recent rebound in household debts raised Bank of Korea's caution. Therefore, interest rates will remain restrictive as fighting inflation and bringing household debt level down are policy priorities.

- Diversified industrial base
- Leader in high-end electronics
- High private and public R&D spending
- Good educational system
- Diversified FDI in Asia

- Competition from China (steel, shipbuilding, electronics, automotive, domestic appliances)
- High level of household debt
- Ageing population
- High youth unemployment
- Net commodity importer
- Overrepresentation of chaebols in the economy
- Geopolitical tensions with North Korea and Japan

2024 OUTLOOK

- Growth will slow in 2024 but remain above the EU average. Household consumption should be resilient thanks to lower inflationary pressures and continued wage growth.
- Activity will be held back by a gloomy external environment and high interest rates, but European funds will continue to support public investment as part of the recovery plan.
- The multi-party coalition formed by the outgoing Prime Minister Pedro Sánchez (PSOE), including pro-independence Catalan and Basque parties, could make governance difficult and increase the risk of political instability.

- Strong comparative advantage in renewable energy (solar, wind)
- Important reforms (labour market, banking sector, bankruptcy law, etc.)
- Increasing financial support from European institutions
- Important private-sector deleveraging (pre-pandemic)
- Manufacturing sector has shown reinvention capacity in recent times

- High private and public debt, highly negative international investment position
- Dual labour market, high structural unemployment
- Large quota of small, low-productivity companies
- High exposure to pandemic-sensitive sectors
- Fragmented and polarized political landscape, territorial unity threatened by the Catalan independence movement

2024 OUTLOOK

- A modest GDP expansion in 2024 is expected after a contraction in 2023, driven by a recovery in private consumption and exports.
- Private consumption will be supported by improved real incomes (due to disinflation) and economic conditions.
- Inflation will fall, due to weak aggregate demand and falling commodity prices.
- The current account deficit is expected to narrow thanks to tourism, enhanced export earnings, and sustained remittance inflows.
- Persistent fiscal challenges with increased spending plans and the need for ongoing debt restructuring.

2024 OUTLOOK

- On April 15, 2023, a bloody conflict for state control began between the armies of two generals, formerly allies in the 2021 coup. Fighting in the south and in the capital is causing malnutrition, epidemics, and population displacement.
- Infrastructure destruction, insecurity, looting, and hyperinflation are eroding production, trade, and consumption. In 2024, growth will depend on the evolution of the conflict. In the event of a lull, it will rely on agriculture, aid, and reconstruction.
- With the near disappearance of the State, budgetary capacities will be non-existent, while foreign aid could remain blocked.

2024 OUTLOOK

- Gold exports and investment will support growth in 2024. The discovery of hydrocarbon deposits will attract foreign investment.
- The depreciation of the Surinamese dollar will keep inflation high. The fiscal consolidation measures demanded by the IMF (VAT, gold mining levies, timber taxation, elimination of subsidies, reduction in the wage bill) will also weigh on household consumption.
- Social discontent with the rising cost of living, persistently high inflation and tax reforms could force the government to call early elections (initially scheduled for 2025).

2024 OUTLOOK

- Despite slower global trade, the Swedish export sector has so far fared relatively well, partly thanks to a weak currency, but is still expected to decline in 2024.
- Tight credit conditions, with variable interest rates frequently used, are leading households to lower consumption. Business investment is falling as well.
- The housing market is quickly declining as households and real estate companies adjust to higher rates.
- Sweden's accession into NATO is still ongoing with Türkiye and Hungary still not having approved it yet. The government is still struggling with a rising problem of gang violence.

2024 OUTLOOK

- Growth is expected to moderate in 2024: the slowdown in expatriate remittances will have a negative impact on household consumption, net exports will deteriorate, while the fall in interest rates will support investment.
- The expected rise in inflation will hamper household consumption.
- The current account deficit will widen in 2024 due to a larger trade deficit (metal exports will not offset imports) and a fall in remittances, particularly from Russia (exacerbated by the depreciation of the rouble).
- The budget deficit will remain similar to 2023, with an expected increase in expenditure and revenues.

2024 OUTLOOK

- Growth should increase, driven by public and private investment in numerous infrastructure projects (mining, roads, manufacturing, railways), mineral exports and a rebound in tourism.
- The budget deficit is expected to fall below 3%, thanks to strong growth and a broader tax base following an improved business climate.
- The expected expansion in gold production and sustained world prices will boost export earnings, offsetting the rise in imports linked to the capital goods required for infrastructure projects, slightly reducing the current account deficit.

2024 OUTLOOK

- Private consumption will expand thanks to the introduction of support policy measures and the continued recovery in tourism, supporting growth in 2024.
- Nevertheless, risks rely on the high household indebtedness and possibly rising commodity prices (crude oil, food).
- Public deficit is likely to widen due to the introduction of populist measures pledged during the election campaign, impacting public debt sustainability.
- The new coalition government has secured a large majority in Parliament, but possible internal disagreement may weaken political stability.

2024 OUTLOOK

- The economy is expected to accelerate in 2024, driven by government spending and the non-oil sector expansion.
- The current account and budget balances, which are heavily dependent on the Oil Fund, are expected to remain in large deficit due to weak oil and gas revenues.
- Timor's aspirations to join the WTO and ASEAN by 2024, offer potential avenues for increased investment.
- A single-party majority government post-May 2023 elections may contribute to stability and implement long-term policies.
- The Petroleum fund faces structural challenges, emphasizing the urgency of economic diversification.

2024 OUTLOOK

- In 2024, growth will be underpinned by household consumption, bolstered by falling inflation, as well as by public and private investment in the local processing of agricultural products, and in health and military infrastructure.
- Port re-export activity will be penalised by the sanctions imposed on Burkina Faso and Mali, users of the Togolese port, and with whom relations have become strained.
- The public deficit will be reduced, with the easing of inflationary pressures enabling a gradual reduction in subsidies and further fiscal consolidation.
- The state of emergency will be extended because of the terrorist threat in the north.

2024 OUTLOOK

- Public finances will remain precarious due to President Saïed's refusal to adopt the fiscal consolidation measures recommended by the IMF. A tax increase should nevertheless reduce the deficit.
- The lack of external financing will lead the authorities to turn to local banks and foreign exchange reserves, which have been weakened. The shortage of foreign currency, by restricting imports, will fuel inflation.
- This context will discourage investment. Inflation and unemployment will dampen consumption. Tourism and textiles could suffer from European reform, and agriculture from drought.
- Unrest is possible in the run-up to the presidential elections in autumn 2024.

2024 OUTLOOK

- Growth will slow slightly in 2024, supported by investment in hydrocarbons and net exports.
- Inflation will rise in 2024, after temporary disinflation factors (base effect and fall in world prices) fade away and goods shortages persist, which will penalise private consumption.
- Lower energy prices will reduce the current account surplus.
- The budget balance will remain positive, thanks to energy revenues, despite an increase in spending on the population (wages and social benefits) and investment in infrastructure.

- Strategic position in Europe
- Association and Free Trade Agreement with the European Union, granted the EU candidate status based on an accelerated procedure
- Significant potential in agriculture, with 55% of arable land (cereals, oilseeds, etc.), and in metallurgy (iron), but which have suffered from war damages
- Skilled and low-cost labour force
- International financial support

- Ongoing Russian invasion
- High fiscal financing needs with low domestic revenues possibilities
- Weak external position
- Low economic diversification, sensitivity to weather and commodity prices
- Declining demographics escalated by the population outflow due to the war, regional inequalities

2024 OUTLOOK

- Higher global oil demand and higher oil prices should sustain growth in 2024. However, the OPEC+ extension of oil production cuts until the end of 2024 will remain a drag. Meanwhile, non-oil sector activity will remain robust.
- Flat oil production will weigh on budget and current account surpluses. Non-oil fiscal revenues will rise thanks to the introduction of the corporate tax and resilient private consumption.
- Political stability will reinforce the country's - global and regional - shipment and trade hub position. However, the level of transparency and democracy will remain challenging.

- Higher degree of economic diversification
- Commercial and air hub of the region
- Significant financial buffers
- Political stability

- Growing regional challenges to trade hub position
- High dependence of fiscal and external revenues on hydrocarbons
- Dependence on foreign labour
- Limited natural resources and low level of infrastructure quality in Emirates other than Dubai and Abu Dhabi

2024 OUTLOOK

- Household consumption is expected to somewhat improve in 2024 with real income rising, partly thanks to high wage expectations and a large rise in the minimum wage.
- Labour market is weakening somewhat, and inflation is persistently high, upheld by wage dynamics. This will complicate Bank of England's decision to cut rates.
- Insolvencies are at historically high levels and are expected to rise further in 2024 as businesses struggle with credit conditions.
- An election is expected in 2024 with the opposition, Labour Party, currently solidly ahead in the polls and the sitting government is not helped by continued infighting within the Conservative Party.

- Production of hydrocarbons covers three-quarters of energy needs
- Cutting-edge sectors (aeronautics, pharmaceuticals, automotive)
- Strong financial services sector
- Competitive and attractive tax regime

- High public and household debt, with the latter being 78.5% of GDP in Q3 2023
- Low productivity and training deficit not conducive to innovation
- Regional disparities between the South-East (especially London) and the rest of the country, particularly in terms of transport and energy infrastructure

2024 OUTLOOK

- Activity is expected to slow, as the lagged impact of interest rate hikes strain household and corporate balance sheets.
- Moderating inflation should allow the Federal Reserve to start cutting rates.
- Given a divided Congress and in an election year, public spending should be contained, contributing to a lower deficit. However, debt servicing and the execution of public investment programs will keep it high.
- The 2024 elections, which promise a rematch between Trump and Biden, will confirm the polarization of the political landscape. Congress could remain divided, hindering policymaking.

- Flexible labour market
- Full employment is one of the Federal Reserve's objectives
- The dollar's predominant role in the global economy
- 70% of public debt held by residents
- Strong attractiveness: leader in research & innovation, huge market, two ocean fronts and privileged tourist destination
- Favourable corporate taxation
- Resource-rich: oil and gas, agriculture, minerals

- Low labour market participation
- High household debt
- Polarised political landscape
- Decrease in fertility rate
- Outdated infrastructure
- Growing income and wealth inequalities overlapping with territorial and racial inequalities
- Trade conflict and technological competition with China

2024 OUTLOOK

- We expect an economic rebound in 2024, supported by cellulose exports (UPM plant), agricultural exports, hydroelectric resources, and the recovery of tourism. The return of precipitation, influenced by El Niño, will contribute to this improvement.
- The depreciation of the peso against the dollar will raise the level of imported inflation. The 3-6% target will be narrowly achieved through monetary tightening.
- Domestic household consumption will increase as Argentine prices become less attractive.
- Government stability will be threatened by tensions within coalition parties before elections reshuffle the political landscape in October 2024.

- Abundant agricultural and forestry resources.
- Strong social homogeneity (universal healthcare coverage, free education), and institutional strength
- Active reform policies (business environment, public finances, social coverage)
- Significant foreign direct investments
- Member of Mercosur, enjoying preferential trade relations with the EU and the United States

- Vulnerability to commodity prices (soy, beef, dairy products, wood, rice)
- Dependency on economic conditions in Argentina, Brazil (tourism), and China (raw materials)
- Inadequate transportation infrastructure.
- Public debt (mitigated by extended maturity and declining denomination in dollars)

2024 OUTLOOK

- GDP growth will continue in 2024, driven by household consumption and investment.
- Slower growth in Russia could have a negative impact on transfers received by households and therefore on their consumption, as could persistent inflation.
- The rise in world gold prices will support exports, but will not be enough to make up the trade deficit, which will worsen the current account balance. The current account balance could also deteriorate because of lower transfers.
- The revision and abolition of tax and customs concessions will increase tax revenues, which will reduce the budget deficit.

- Abundant natural resources (gas, gold, copper, hydroelectric potential)
- Economic reforms, public investment and international financial support encouraging FDI
- Negotiation process to join the World Trade Organization and observer member of the Eurasian Economic Union
- Enhanced Partnership and Cooperation Agreement with the European Union and various bilateral agreements

- Dependence on Russia and China
- Dependence on commodities, weather conditions for agriculture and expatriate remittances
- Weakly competitive markets and low share of the private sector in the economy
- High unemployment, low standard of living, large rural population and informal economy
- Low financial intermediation, high dollarization

VENEZUELA

COFACE ASSESSMENTS	COUNTRY RISK	E
	BUSINESS CLIMATE	E

POPULATION Millions of persons	26.9
GDP PER CAPITA US Dollars	3,422

2024 OUTLOOK

- Activity will pick up, driven by a further increase in oil production, following the easing of US and European sanctions. However, the impact will remain limited by obsolete infrastructure and under-investment, due to limited access to capital markets.
- While a change of government remains unlikely, the political situation could improve. The temporary lifting of some US restrictions on several sectors is conditional on compliance with the electoral roadmap agreed between President Maduro and the opposition, which would encourage the government to continue along the road to democratisation.

- World's largest oil reserves and offshore gas potential

- GDP remains well below 2013 levels
- Economy heavily dependent on hydrocarbons, loans from China and Russia, and energy cooperation with Iran
- The lifting of certain US sanctions on the oil sector in October 2023 will be re-examined in April 2024
- Defaulting on its sovereign and quasi-sovereign debt (PDVSA), delays in payments for current trade
- Shortage of foreign currency and commodities
- Non-transparent and discretionary management of oil revenues, which could be further eroded by rebates if sanctions are reinstated
- Very high inflation, poverty and inequality
- Crime, corruption

2024 OUTLOOK

- Supportive fiscal and monetary policies, as well as improved export prospects would support economic growth in 2024.
- Foreign direct investment inflows could, nonetheless, slow due to the adoption of the global minimum corporate tax. In addition, the property market is expected to remain weak amid policy-driven crackdown.
- The current account is set to turn into a surplus, contributing to the limited foreign exchange reserves (2.9 months of imports at the end of 2022).
- The anti-corruption campaign enacted by the authorities has consolidated further Prime Minister Trong's power.

- One of the fastest growing economies in the region
- Beneficiary of the U.S.-China trade war and 'de-risking' strategies
- Large labour pool and low labour costs
- Development strategy based upon production upscaling and diversification
- Strong agricultural potential
- Good endowment of natural resources (metals and energy)
- Highly integrated into global trade (18 FTAs)

- Shortcomings in the business climate (data transparency and corruption)
- Dependent on China's supply chains
- Incomplete reforms of the public sector, elevated indebtedness amongst SOEs
- Inadequate infrastructure levels
- Fragile banking system

2024 OUTLOOK

- The improvement in the business climate and governance, and the privatization of two mines, will encourage extractive investments. Private consumption will remain constrained by inflation, which will motivate further monetary tightening.
- Fiscal consolidation, guided by the IMF's Extended Credit Facility program, will reduce the public deficit, despite rising social spending.
- Mining activity will gradually improve with rising global demand for copper and its price.
- After a setback in November 2023, the country will continue debt restructuring negotiations with private and official bilateral creditors, including China.

- Mining production (copper, sulfur, cobalt, nickel) and potential (uranium, gold, diamonds, manganese)
- Agricultural wealth (corn, tobacco, sugar cane)
- Major hydroelectric potential

- Dependence on copper, accentuated by the dependence on China, the main ore importer
- Sovereign default in 2020 and unsustainable external debt
- Landlocked and dependent on the transport routes of neighbouring countries
- Electricity production is based almost exclusively on hydropower; transport networks are unreliable
- High levels of inequality; healthcare, educational and administrative deficiencies
- Vulnerability to climate change

2024 OUTLOOK

- In 2024, growth will be sustained by mineral exports, thanks to high gold and nickel prices and the exploitation of new platinum and lithium deposits.
- The compression of imports due to low foreign exchange reserves and the limited effectiveness of monetary policy due to high dollarisation and the monetisation of the public deficit will contribute to maintain high inflation.
- Persistent post-election tensions between the ruling party (Zanu-PF), winner of the controversial August 2023 elections, and the Coalition of Citizens for Change (CCC) will disrupt the country's debt restructuring negotiations.

- Plentiful mineral resources (platinum, gold, diamonds, copper, nickel, rare earths)
- Agricultural assets (maize, tobacco, cotton)
- Tourism development potential

- Economy devastated by hyperinflation and depreciation of the local currency, caused by the monetisation of the deficit and foreign currency shortages, themselves aggravated by corruption and smuggling at the borders
- Rain-fed agriculture exposed to climate hazards, to the lack of inputs and to poor planning, and suffering from low productivity
- Precarious food and health situations, dependence on humanitarian aid
- Dependence on volatile commodity prices, some of which are smuggled out of the country
- Under-investment in infrastructure (particularly energy and transport)
